We live in the midst of a way of life which says to us that just about every item we want to possess has a price that must be paid to another. Such was not so true with our pioneer forefathers who opened the wilderness to new opportunities for future generations. They had to have great powers of imagination, and in addition be able to develop skills that could be used in molding what they wanted from the raw materials they found. In our advanced day of specialization, we do our own jobs and expect others to produce for us through the ways in which they expend their energies.

It would be difficult to find many who would want to trade our economic system for the one our American ancestors had to endure, but a glance at the past can help us appreciate some things about the present. We live in a time of recognized dependency, such as other generations have not known. This is good; not bad. As we depend upon others, so others have to depend upon us. This means that there must be a medium of exchange, so the price tag has resulted.

The pioneer could obtain the land he wanted by being able to ride faster than another who had the same idea. The first one to arrive and stake his claim became the owner, and he could live rather well without a neighbor. Not so today. Our closely knit world challenges us to a degree of respect, loyalty and devotion that can bring peace to a waiting world. The price tag of this item is high, but we must believe that it is within reach.

FALL WARDROBES PROBLEM OF MOMENT

It might be that some of us should go shopping for fall wardrobes. It might be that we are completely out of self-respect. It might be wise to exchange some self-righteousness we picked up somewhere for some humility which they say is less expensive and wears better.

We could look at some tolerance which is being used for wraps this season. We could look at some pretty samples of lace—we are a little low on that and can never have too much of it.

Or we might try to match some patience my neighbor wears. It is very becoming to her, and it might look well on us. We might even try on that little garment of long-suffering they are displaying.

And we must not forget to have our sense of humor mended, and look around for some inexpensive everyday goodness. Isn’t it surprising how quickly one’s stock of goodness is depleted? Yes, we should all go shopping soon!
