THE GOOD NEWS ABOUT CANCER
Cancer is not always the deadly disease it is expected to be, say its some-time patients who are living to tell about it.

At Jewish Hospital, developments which improve diagnosis, modes of treatment, life expectancies and the likelihood of curing the disease occur continuously; here's a review of recent ones.

Jewish Hospital's participation in experimental drug therapies administered through the Southeastern Cancer Study Group can mean the difference between ineffective treatment and cure for some of our cancer patients.

During a retraining session, Reach-to-Recovery volunteers shared their experiences and learned about the latest breast reconstruction procedures.

Jewish Hospital, the only institution in St. Louis to perform liver surgery using a Cavitron Ultrasoundic Aspirator, is able to be much more aggressive against tumors of that organ.

This guide to the scintillating Central West End will help you find Jewish Hospital and its parking facilities, and the restaurants, accommodations and attractions within walking distance.

The Jewish Hospital Auxiliary presents an action strategy for prevention, detection and treatment.

ON THE COVER: In honor of the Auxiliary's Cancer Answers program, detailed on page 20, this issue of 216 is devoted to the subject of oncology. The good news is that patients like Cynthia Frohlichstein, our cover model — shown here with husband Harvey — are living longer and getting more out of life, thanks to better technology, improved therapies, and the close relationship between private physicians and staff specialists. Read Ms. Frohlichstein's story, those of other winners and the medical help that gave them an edge, beginning on page 2.
Several years ago, Burt Reynolds starred in a movie called "The End." At the beginning, he learns that he has only six months to live. He spends the next hour and a half or so trying to take his own life (with a little help from friend Dom DeLuise and hilariously ineffective results) before the anticipated ravages of cancer overtake him. Finally, he recognizes that his demise is not a certainty, and, toward the end of the film, makes a new start at life.

While life for the cancer patient is not a comedic film, the outcome of the Reynolds story is played out with increasing frequency in reality: Cancer does not necessarily equate with death. It is rare for a cancer patient to come to Jewish Hospital and be told there is nothing that can be done to make him/her more comfortable or to try to stop the disease process. Technological developments now make detection and diagnosis possible at earlier stages. Cooperative efforts between private physicians and full-time doctors at Jewish Hospital, new modes of treatment, the coordinated approach of teams of medical specialists and an expanding range of protocol options make cure, for some, a reality. For many others, cancer and a good quality of life are not mutually exclusive conditions.

That is the encouraging message in the stories of the people presented on the following pages, a few of the many victors and winning contenders. They share the will and strength to keep up the fight. All would consider themselves to be blessed with good fortune, but are to be credited, too, for taking active roles in their own recoveries.

Jeff Cotner is the product of simple small town life, where hard work and family ties are the center of existence. He looks like a former high school football player, one who consumes his meat and potatoes with a hefty appetite. Yet his face bears no hardness. It is gentle and forgiving, framed in light brown waves, and displays no evidence of illness.

One day three years ago, while working near his home in High Ridge, Missouri, Mr. Cotner felt excruciating pain up and down one side of his body. He noticed that one of his testicles was swollen. His physician began administering treatment for what he thought was a urinary infection. It lasted for 10 months, not unusual, said the doctor, for the condition, which could continue for close to a year before the swelling subsided. Finally, Cotner was sent for a CT Scan (computed tomography, a diagnostic tool), which revealed a tumor, possibly cancerous.

Within two days he was
The doctors say I’m getting better. And I know I am. But I don’t want to be better. I want to be all better,” insists plucky Florence Stegelmeyer. “I just want to get back to feeling the way I did, to have the same level of energy I had,” says the spry septagenarian who claims to eat well, sleep well and, except for an initial reaction of lethargy to the drug Compazine, to suffer no adverse side effects of treatment.

In July of 1983, Mrs. Stegelmeyer was feeling very tired at the time of her regular monthly appointment for hypertension with Norman W. Drey, M.D., attending physician at Jewish Hospital, who has been her doctor for 30 years. By that night she was in the hospital, and within a week was receiving chemotherapy under the care of Dr. Alan Lyss for cancer of the bone marrow.

“Dr. Drey told me they thought they were going to lose me,” she says in a strong voice, proud with defiance, one year later. Her case was particularly dramatic because the lymphoma was the second cancer Stegelmeyer faced, after cancer of the uterus, for which she received extensive radiation therapy and underwent a hysterectomy five years ago.

Some might have taken a justifiably pessimistic outlook with a patient like Stegelmeyer. Her age, prior bout with cancer, the delivered levels of radiation — which affected the bone marrow — and the presence of a very aggressive-looking tumor all indicated a poor prognosis. Yet Dr. Drey remained alert and persistent, Dr. Lyss diligent and the patient stronger than anticipated.

She underwent seven blood transfusions in five months, the last in November. She still receives chemotherapy every three weeks, taking Compazine to prevent her from experiencing nausea associated with the treatment. Her normal weight has returned, and her own hair covers her head. “The quality of my life is still there,” she notes, thankful for her Granite City friends and relatives, and the fact that she is asymptomatic.

Hearing that cancer cells still show up in her blood — even though there are fewer with each test — makes her angry. “I complain and curse. But what good does that do? You just keep fighting. It’s your life you’re fighting for. Just to be alive it has been worth it.”

During the 10 months prior to diagnosis, Cotner had no thought that his “infection” was anything more serious. Hearing the word cancer was upsetting, especially for his wife, Denise. “I could only think of my relatives who have died from it. The doctors did try to keep our hopes up, they tried not to scare us too much at once. We figured that since we’re a little young, that they would go easier. But they were straight with us. It was shocking at times. But we wanted to take in all the information we could find.”

When he received the report, Cotner says, “I was kind of scared. I don’t think I grasped the situation for a while. I didn’t realize what it would involve.” Yet his attitude never waivered from his basic approach to life. “I felt like I wanted to get it over with, get cured, and get on with my life. I never let anything get to me,” he notes in his easy, matter-of-fact manner. “Other than this, I’ve never really been sick.” His wife adds that he has always been a fighter, and comes from a family of fighters who provided unending support. Cotner lost all the hair on his body, had adverse reactions to certain drugs, participated in an experimental drug therapy (as part of the Southwestern Cancer Study Group, see “Risks Calculated for Cancer Care,” page II), which had shown high success elsewhere, and just kept going. “I would have chemotherapy and just think about planning and doing other things, like going fishing with my dad.”

Six months after chemotherapy began, in June of 1983, Cotner’s blood tests were coming up normal. But X-rays showed nodules, which the doctors wanted to remove. Surgery involved taking out lymph nodes and, in small pieces, about half of both lungs. “I was scared because they told me everything was ok and yet they were going to open me up. I couldn’t quite understand that. But they wanted to get rid of all the cancer, and had said they would take out sur-
“I was very lucky I caught it in time. I did not have a day’s pain in my stomach. I had no chemotherapy, no follow-up aside from a periodic blood test.” Mr. Kristal seems nonchalant about talk concerning the procedure done by Ira Kodner, M.D., colo-rectal surgeon, eight years ago. He tosses in, almost as a trivial aside, that his wife also had cancer of the colon, 24 years ago, when they had been married just six months. Hers, too, was caught early and removed.

Instead of speaking about illnesses in his past, Kristal prefers to direct his attention to preventing illness in the future. As a result of his own brief joust with the disease, Kristal devoted his life to raising money for the American Cancer Society, an activity which claims a good half of his time. (The rest is spent in a real estate business.) During his first year of involvement, he raised $6,000 through a newspaper recycling program he established. Last year, the program brought in $59,000. The idea for new promotions keep coming: a Pasta House telethon, profits from a Central Hardware concession, a benefit party at Chi Chi’s restaurant. In 1983, the Central County American Cancer Society, on whose board both he and his wife sit, named him Volunteer of the Year, citing the $148,000 he has personally raised in the past three years alone. Sales of holiday cookies, car auctions, a Steak ’N Shake promotion and old watch program run in cooperation with Wehmeuller Jewelers have all contributed. For his successful efforts, American Cancer Society staff members call Kristal “Three-M Man” (Money-Making Machine).

His words of advice to others who might have to face the disease come straight from his pet organization: have regular check ups and look for warning signs.
Jewish Hospital. "As soon as I heard," recalls Frohlichstein, "something like this." Around you is until you face how marvelous everything was gone. You never realize pared. All of my depression order. I was mentally pre-

It puts your priorites in can also be a positive thing. I gave me a lot of time to think about things. But that can also be a positive thing. It puts your priorities in order. I was mentally prepared. All of my depression was gone. You never realize how marvelous everything around you is until you face something like this."

That is not to say that the attractive, active, woman did not have to deal with the anxieties associated not only with cancer, but with the possibility of removal of a breast. "Our world is Play-

boy centerfolds and sexy commercials and you start thinking 'how important is this? What's going to happen to my life?' I really enjoyed dating. I didn't want to be facing years of sitting home alone. You care, more than anyone who has not had it done can know, because you've lost a part of your body, especially since it's tied into everything sexual. You want to be as whole as you can be. It is traumatic.

"But at the same time," she adds emphatically, and with philosophical perspective the illness gave her, "you're waiting for lab reports to see if you're going to live. You realize that if that's all you were, you weren't all that much anyhow."

One week after she received an affirmative answer to her recovery room question "did they cut off my boob?" Frohlichstein had her other breast removed: The malignancy found in it was contained and could have been excised, but the patient was given the option of mastectomy. "It was a hard decision, but I couldn't live with the fear of not knowing what would happen if I did not have the surgery. And I knew I was going to have reconstruction, even though it was revolutionary, at least for St. Louis."

But that would be several months and several amusing incidents later. "One night I was out with some friends at Houlihan's," the former patient recounts with characteristic good humor. "This guy walked across the bar and said, 'I hope you don't think I'm rude, but you have the most beautiful boobs I've ever seen!' If the prostheses I was wearing weren't so expensive," vows Frohlichstein, "I sure would have taken one out and given it to him! It shows how important breasts are — and how people can't tell the difference. There were some men I never heard from again, but how lucky I was because it was an automatic elimination of all the people I wouldn't want to bother with."

One she did care for walked into her life two days prior to her hospitalization. He was a blind date, and the first truly nice man she had met in a long time. With anxiety weighing on her, and figuring that she would not see him again, she told him of the impending confirmation diagnosis of her problem as breast cancer. "I think about the fact that I'm ok when I go in to reach it in time. That's why it is so important for women to self-examine," she stresses, taking up one of the key battle cries against the disease.

"I try to make myself available to people who are single. That's the most important thing I have to offer. We talk about coping with everyday occurrences, exercise, feelings, family. I can share with someone going through this surgery that the results are temporary. I've seen young women who have gone on and had children. It doesn't stop you from being a woman."

"I think about the fact that I'm ok when I go in to make a Reach-to-Recovery call," the mastectomy support group volunteer states. "Breast cancer doesn't have to be devastating with the new things available to women today. They've made such progress in the past nine years with initial surgeries, types of surgeries, the things they're doing now — if you're lucky enough to reach it in time. That's why it is so important for women to self-examine," she stresses, taking up one of the key battle cries against the disease.

"I try to make myself available to people who are single. That's the most important thing I have to offer. We talk about coping with everyday occurrences, exercise, feelings, family. I can share with someone going through this surgery that the results are temporary. I've seen young women who have gone on and had children. It doesn't stop you from being a woman."

"I think about the fact that I'm ok when I go in to make a Reach-to-Recovery visit. I appreciate life so much more than I did before my experience. By walking through that door, looking well and being happy — it's a very big thing to someone in a hospital room wondering what life is going to be like now. Well, I've got two marvelous boobs that Dr. Eades
A fourth-generation farmer, Lester Ennen has lived his 66 years in Keyes Port, Illinois, several miles along country roads, south of Greenville. Until he was old enough for retirement, he had never been sick. Then, he began passing blood. In February of 1983, after three months of unsuccessful treatment to eliminate the bleeding, Mr. Ennen entered a Clinton County hospital to have almost two feet of his colon removed. There was no cancer, there was no follow-up treatment, and he returned to farming.

Fifteen months later, he discovered more blood, "The doctor sent me back to the hospital and the first thing they did was take x-rays. They showed a spot on my lung. I'd had an x-ray the year before and didn't have anything. This was something new." Ennen speaks with the easy drawl of a country tongue, as accepting and unassuming as if he were chatting about the weather with the ol'boys outside the general store. "So they forgot about everything else and went on to that. Mom here," he nods toward his wife, Martha, "got hold of our daughter who's a nurse at another hospital. She said 'well you better get him out of there.' There's a doctor up at her hospital who knew Lyss [Alan Lyss, M.D.] well, and could tell he's about the best you can go to.”

On that recommendation, Ennen transferred to Jewish Hospital, where a rare bleeding disorder was discovered. It had probably been the cause of the initial colon problem, and may or may not have had any relation to the lung cancer — except that it interfered with plans to surgically remove the malignant mass. After postponing the operation repeatedly because Ennen's blood did not clot fast enough, the time element became crucial. In an eleventh-hour maneuver, a pheresis (blood-separating) machine from the Red Cross was brought in for a plasma exchange, making it possible for Martin Bergmann, M.D., cardiothoracic surgeon, to eliminate the cancer, along with about half of Ennen's lung. No additional disease was found in the lymph nodes or other organs.

Lester Ennen can almost forget about the ordeal. "I can't tell I've ever been operated on," he says, except that he abruptly gave up his 41-year smoking habit. He has not "got strength built up yet — no lifting or hard work. So I just sit down and take it easy.”

Frohlichstein will communicate that message during the Jewish Hospital Auxiliary's Cancer Answers program (see page 22), with a special fashion show she is organizing and calls Does She or Doesn't She? "Almost all the models will be women who've had mastectomies. Some will have had reconstruction, some won't. And then I'll throw in some ringers — ones who haven't had mastectomies. And until the very end of the show, the audience will not know who has or hasn't.

"One of the things we worry about when we have a breast removed is that we're going to be less than a woman. It doesn't change anything except we're minus a breast. You're still the same woman, look good, wear clothes, go swimming, play tennis, do all those things just like before. You might even enjoy them more because you're so glad you're alive."

To get that sentiment across, Frohlichstein will tell people just about anything about her own situation — except specifics of her disease process or treatment. This reticence is to prevent others from comparing themselves and their therapies with her own and being discouraged — without reason — to find differences, often encouraging ones brought by the passage of time and the progress being made continually.

While convinced that a positive attitude contributes to a positive prognosis, she knows that all the good thoughts in the world might not be enough to counter the disease. But she also knows that it's a good place to start. She took control of her situation, made some difficult decisions, researched on her own the options for follow-up care, and, she notes, with more than a little thanksgiving, she was lucky. Yet she strongly believes "with the things happening now, thank God, many people walk out of that hospital and if anything, their lives get better. Mine did."
Understanding, treating and diagnosing cancer is a major priority at Jewish Hospital, as evidenced by the number of basic and clinical research projects underway and the program and medical protocol developments being made. Within the past few years alone, staff researchers have made major strides in discovering key components in the way cancer cells live, multiply and divide. Positive approaches to patient care have also been developed at Jewish Hospital, approaches which often utilize these new procedures or are the result of multidisciplinary efforts to provide the most effective and individualized levels of treatment. These subjects have been covered in previous issues of 216. In the spirit of this special issue on cancer, we present a review of a number of these encouraging accomplishments.

**Marilyn Fixman Cancer Center**

The Marilyn Fixman Cancer Center is a multidisciplinary effort which centralizes ambulatory cancer care and provides comprehensive medical, psychosocial, educational and paramedical support services for persons affected by malignant diseases. The services are associated with the training and oncology research programs of Jewish Hospital and the Washington University School of Medicine. The center is directed by Thomas F. Deuel, M.D., director of hematology/oncology, and professor of medicine and biological chemistry at Washington University School of Medicine, and Alan P. Lyss, M.D., division of hematology/oncology and assistant professor of medicine at Washington University School of Medicine. Dr. Deuel's work in cancer cell structure research is internationally recognized (see the following section on his work with blood growth factors, PDGF). Dr. Lyss is actively involved in pursuing patient care protocols for a wide variety of cancerous diseases.

An extensive cancer registry and the computer facilities of the Southeastern Cancer Study Group, a national cooperative association of university-affiliated cancer researchers (see “Risks Calculated for Cancer Care,” page 11), are additional resources for the staff. The tumor registry, in operation since 1977, provides essential data such as cell types of reported tumors, diagnosis date, treatments utilized, and survival. Types of tumors may also be correlated according to age, sex, race, smoking and alcohol history, be complete.

Ancillary support services are provided by the Jewish Hospital dietary, pharmacy, social work and volunteer departments, as well as total parenteral nutrition services. The staff of the Jewish Hospital radiation oncology department and the affiliated radiotherapy programs of the Mallinckrodt Institute of Radiology are involved in the treatment of cancer patients.

The Marilyn Fixman Cancer Center provides patient care for women affected by cancerous and non-cancerous breast disease in the Marilyn Fixman Breast
CATCHING UP

Radiation Oncology Department

On September 6, 1983, the newly-staffed, remodeled and restructured Jewish Hospital department of radiation oncology opened its doors. A joint project of Jewish Hospital and the Mallinckrodt Institute of Radiology (a sister institution within the Washington University Medical Center), the department is devoted to the management of patients with cancers by radiation alone, or in combination with drugs or other therapies. The center's broad scope is unique within the St. Louis medical community.

Soon to be part of the Marilyn Fixman Cancer Center is the Marilyn Fixman Lymphoma Center, a multidisciplinary program coordinating the diagnostic and therapeutic management of patients with lymphoma, Hodgkin's Disease, multiple myeloma and related diseases. The Lymphoma Center will be operational within the coming year.

A brochure detailing the facilities and services of the Marilyn Fixman Cancer Center is available through the Jewish Hospital publications department, 454-7239. The telephone number for the center is 454-7463.

TECHNOLOGY

Radiation Oncology Department

On September 6, 1983, the newly-staffed, remodeled and restructured Jewish Hospital department of radiation oncology opened its doors. A joint project of Jewish Hospital and the Mallinckrodt Institute of Radiology (a sister institution within the Washington University Medical Center), the department is devoted to the management of patients with cancers by radiation alone, or in combination with drugs or other therapies.

The department utilizes a Cobalt 60 unit and a state-of-the-art Varian Ximatron simulator. A 6 MV linear accelerator was purchased for installation into the radiation therapy facility which will be located in the lower level of the new Ambulatory Care Center (scheduled to open in the fall of 1985). That facility will have seven times the current space and BCG Therapy

Bladder cancer, which strikes approximately 38,500 patients each year, is one of the most common urologic problems, second only to prostate cancer. Jewish Hospital is one of approximately 10 major institutions across the country investigating different treatments to combat superficial bladder cancer. One of these, under research since 1981, is BCG, Bacille Calmette-Guerin.

A weak strain of tuberculosis bacteria, BCG has been shown to cause a regression of established bladder tumors and prevent tumor recurrence. It is instilled through a catheter directly into the bladder in a painless, outpatient procedure. Six treatments are required to complete the protocol, with minimal side effects such as low-grade fever and chills, or discomfort resembling a mild bladder infection.

"Cancer is often not fatal, but the fear of cancer or its therapy can be."

Todd H. Wasserman, M.D., director of the Jewish Hospital department of radiation oncology.

For a reprint of "Treating the Disease with Disease," a story detailing this research which appeared in the July/August 1983 issue of 216, call 454-7239. For more information on the procedure, call 454-7822.

"What we are seeing is regular development of useful information being brought together by physicians, nurses and other health care professionals working in a team concept. That is what I as an oncologist find exciting about being in Jewish Hospital."

Gary Ratkin, M.D., attending medical oncologist

Todd Wasserman, M.D., chief of lymphoma service at Mallinckrodt Institute of Radiology and associate professor of radiation oncology at Washington University School of Medicine, directs the department. He was chosen for the position following a year-long nation-wide search for a director.

The department utilizes a Cobalt 60 unit and a state-of-the-art Varian Ximatron simulator. A 6 MV linear accelerator was purchased for installation into the radiation therapy facility which will be located in the lower level of the new Ambulatory Care Center (scheduled to open in the fall of 1985). **Hepatic Pump**

Patients with certain types of liver cancers or tumors can now receive chemotherapy directly into the liver via an implanted hepatic pump, a procedure developed as a joint venture between the Jewish Hospital departments of surgery, oncology, nuclear medicine and pharmacy.

The pump, implanted into the patient’s abdomen, gradually delivers specified amounts of chemotherapy directly into the liver’s blood supply. The direct drug delivery only affects the diseased area, avoiding the problem of harming healthy organs during systemic chemotherapy. The two-chambered pump, approximately the size of a pacemaker, holds the drug in one side, while the other side contains a substance that controls the drug delivery rate. The body temperature heats the inert substance into a vaporous state, which becomes the energy that runs the pump. The kinetic nature of the pump, making gradual delivery of a specified amount of chemotherapy possible, is what the team of physicians is finding so remarkable. When the patient needs another infusion of chemotherapy (approximately every two weeks), the physician need only inject a needle through the abdominal wall into the pump. Dosages of chemotherapy are alternated with a sterile saline solution and are gradually reduced.

Surgeons work in concert with oncology and nuclear medicine specialists to determine if a patient is a likely candidate for the pump implantation. The cancer must be isolated in the liver, in order to shield other organs from the toxicity of the chemotherpay.

For a reprint of “Hitting the Target with Chemotherapy,” an in-depth article on the procedure which appeared in the November/December 1983 issue of 216, please call 454-7239.

---

**PDGF**

PDGF (platelet-derived growth factor), a protein released from blood platelets during blood clotting and thought to promote wound healing by stimulating cell growth, has been the focus of study by Thomas F. Deuel, M.D., director of the Marilyn Fixman Cancer Center, director of the Jewish Hospital division of hematology/oncology and professor of medicine and biological chemistry at the Washington University School of Medicine. The work of Dr. Deuel and his team of researchers has expanded over the last three years into a collaborative effort with researchers in England and Sweden.

When platelet-derived growth factor is released at the site of an injury, it stimulates cells to synthesize DNA and to divide, which is why it is designated a growth factor. According to Dr. Deuel, it is a very powerful one. The interest in PDGF has been heightened not only by the growth factor’s ability to regulate cell growth but by the marked similarity in behavior between cells that are stimulated by this protein and cells that grow malignantly. A cancerous cell, like one that is stimulated by PDGF, divides rapidly but its growth continues unchecked, multiplying at an unregulated rate. Even more intriguing to Dr. Deuel and his staff was the observation that cells which are already virus-infected or malignant are not affected when stimulated by PDGF. They are stimulated as much as they can be by the cancer, believes Dr. Deuel.

After analyzing the PDGF amino acid structure, the international researchers were excited by the observation that the PDGF was essentially identical to an amino acid sequence for what is called “the transforming protein” of a cancer-triggering...
CATCHING UP

virus called simian sarcoma virus, which had been isolated previously from tumors in woolly monkeys. It is hoped that the findings will prove to be instrumental in understanding the mechanism of transformation in some cancers, particularly those of the connective tissues.

SUPPORT SYSTEMS

The following patient support group programs, designed to help the patient and family cope with a change in lifestyle and needs, are offered through the Auxiliary Office at Jewish Hospital. Except where otherwise designated, for more information, call the Auxiliary Office at 454-7130.

“Far greater strides are being made with cancer than with other diseases. With new ideas, patients see that the scientific community is working as hard as it can and it gives them increasing optimism.”

Joel Lester Zeffren, M.D., attending medical oncologist

**I Can Cope Program**

The eight-week support and education program for cancer patients and their families provides an opportunity to study and share problems encountered in living with cancer. Jewish Hospital, the Marilyn Fixman Cancer Center and the American Cancer Society are co-sponsors. Call Mary Lou Bedient, 454-8685, for more information.

**Reach to Recovery**

The support group for mastectomy patients is sponsored by the Jewish Hospital Auxiliary. Former mastectomy patients visit newly-diagnosed women to offer support and constructive information about coping with the disease and surgery.

**United Ostomy Association of St. Louis**

The self-help group for all ostomates is sponsored by the St. Louis branch of the American Cancer Society and meets monthly in the Brown Room at Jewish Hospital Call 567-9730 for details.

**Bikur Holim (Visit the Sick)**

A cancer patient who is affiliated with a participating congregation will be visited by trained volunteers from the congregation, at the suggestion of the rabbi. The Union of American Hebrew Congregations, Jewish Family & Children’s Services and Jewish Hospital co-sponsor the program. Call Hillary Friedman, 997-7566, for more information.

**“It makes you feel good to see someone you have treated for cancer practicing law or accounting or medicine or dancing on Broadway. I’ve seen all of these. One of my patients danced this summer in ‘Sugar Babies’ at the MUNY.’”**

Morton A. Levy, M.D., attending medical oncologist/hematologist

**“There has been a great deal of progress made in diagnosis and treatment of patients with cancer. And we—at Jewish Hospital and the medical center—are in the forefront of that progress.”**

Carlos A. Perez, M.D., chief of radiation oncology at Mallinckrodt Institute of Radiology

**10**
Enos Kessel had almost abandoned the hope of finding successful treatment for cancer. Diagnosed with lymphoma (tumor of the lymphoid tissue) in 1979, the 65-year-old construction operator from Ava, Illinois, was first treated with standard chemotherapy by a local physician. When the lymphatic cancer continued to progress, Mr. Kessel was referred to Gary Ratkin, M.D., medical oncologist, Jewish Hospital attending physician. Under Dr. Ratkin's care, Kessel was placed on another form of drug therapy, this time a combination of four drugs. Once a month, Kessel made the 160-mile round trip to St. Louis for chemotherapy which, according to Dr. Ratkin, was a standard drug therapy for lymphoma and had been relatively successful in treating the disease. But in Kessel's case, there was only a brief response, and after five months, the disease had spread to his bone marrow. Worse, each treatment was accompanied by debilitating side effects of vomiting, diarrhea, hair loss and weakness. The once humorous and positive man who had thrived on work became easily irritated and fatigued. He began to dread the treatments that he had hoped would improve his condition. "The effects of the treatments seemed worse than the cancer itself," recalls Kessel. "They made me wish I was dead."

Dr. Ratkin decided to try two more chemotherapy regimens, both five-month series of combined drugs, but nearly a year later, Kessel had still not responded significantly to any standard chemotherapy. In August, 1981, Dr. Ratkin asked Kessel if he would be willing to participate in a national research study that involved treatment with experimental drugs (FDA-approved drugs that have not been tested sufficiently on humans to be placed on the commercial market). "I felt I couldn't lose anything by trying it," says Kessel. "I was already at a standstill." Kessel was placed on the study and treated with an investigational drug called Gallium Nitrate. Within weeks his condition had improved, and after two months the disease was in complete remission. Now in his third year of treatment on the investigational drug, Kessel's lymphoma has stopped progressing, he has resumed a normal lifestyle and he has never suffered from side effects. According to Dr. Ratkin, Kessel's response to this drug marks one of the most successful cases in the country. Says Kessel, "I feel like a new person. Even if I'm never completely cured, coming this far was worth the risk. I hope other people will benefit from the drug in the way that I have."

Kessel's happy outcome is a direct result of Dr. Ratkin's participation in the Southeastern Cancer Study Group (SECSG), a research cooperative funded by the National Cancer Institute (NCI) that generates nationwide research studies to improve cancer therapy. Although the SECSG is headquartered at the University of Alabama in Birmingham, Alabama, its programs involve cancer specialists who represent 21 medical centers throughout the United States. Members, designated as investigators, meet every six months to participate in discipline-oriented, disease-oriented and administrative committees to establish protocols (scientific, experimental designs of study) to monitor member institutions' research efforts and to provide a scientific direction for future studies.

The Washington University Medical Center, has been
eight years.

Locally Washington University members meet monthly at Jewish Hospital to discuss treatment modalities. Dr. Lyss believes that SECSG’s cooperative concept has flourished at Jewish Hospital because its physicians recognize the importance of utilizing cooperatives. “SECSG is a major component of the Jewish Hospital cancer program,” says Dr. Lyss. “In fact, we have recently augmented our commitment to SECSG and a greater excitement within the group has been generated. We have added physicians to the staff, specialists who are excited about sharing their ideas in SECSG protocols.”

According to Dr. Ratkin, the Jewish Hospital pharmacy’s support has played a fundamental role in the increased activity of SECSG at Jewish Hospital. “All of the drugs we use are under federal regulation and have to be monitored carefully,” explains Dr. Ratkin. “They must be stored under certain conditions, prepared in special ways and they all have different supply schedules. The pharmacists must also maintain exact inventories and records for the Food and Drug Administration. The Jewish Hospital pharmacists have the entire system so well organized that they have created a model for other university hospitals.”

The Ecumenical Approach

Until the last decade, cooperative groups like SECSG focused their efforts primarily through a single modality approach, typically within the hematology/oncology discipline, but with advances in cancer treatment in other specialties, experts have recognized that optimum care depends on multi-modality treatment. “Participating in a cooperative group like SECSG helps to solidify that approach,” says Dr. Philpott. “It brings experts together, not only at Washington University Medical Center, but from throughout the country in the day-to-day care of patients.”

Also fundamental to the success of SECSG research studies are sufficient numbers of appropriately selected patients. According to Dr. Meyer, advances in cancer treatment would be hindered without the patient accrual that cooperative groups like SECSG generate. “Cancer is a difficult disease to treat because it is usually chronic in nature, unlike pneumonia, meningitis or myocardial infarction where the results are often immediate,” says Dr. Meyer. “During treatment for cancer, one must observe patients for extended periods of time. Some cancers are so rare that to determine the optimum treatment could take one institution decades. By studying large groups of patients, in the context of established protocols of treatment, one can get answers faster.”

The Protocol Process

To be entered on an SECSG study, a patient must have a disease that is currently under investigation by SECSG. The cooperative group is now focusing on six areas: breast, genitourinary (GU), and lung cancer; acute leukemia; lymphoma and bone marrow transplantation. Even if a patient has a specific cancer under research by the SECSG, he or she might not qualify for a protocol, particularly if its side effects are considered too risky for the patient’s chances for recovery. For instance, a protocol might be too dangerous for patients with cardiac disease or too aggressive for elderly candidates. For those patients, standard, instead of experimental, treatment might be a better approach.

Patients who want to participate in any investigational study must read and sign consent forms which have been written specifically for each protocol by the investigators and edited by Patricia Scannell, SECSG data coordinator, department of surgery, and approved by the hospital’s Institutional Review Board, comprised of physicians, lay people, lawyers and administrators. Each form describes the nature and purpose of the study, potential side effects and complications, and how the protocol’s success or failure is determined. It also assures that each patient’s questions will be answered promptly by investigators, that the patient can withdraw from the program at any time and,

Patricia Scannell

if adverse consequences occur, that the patient will receive the best emergency care.

Once a consent form is signed, Ms. Scannell contacts the SECSG headquarters in Birmingham and registers the patient on the appropriate course of treatment. Whatever the therapy, the patient’s progress is monitored according to strict guidelines. “Each step of the treatment — every blood test and every X-ray — is obtained at designated intervals,” says Dr. Lyss. “I think that patients who are on research studies receive the best of
care because of the strict guidelines. It would be impossible for anyone to gloss over any part of the treatment.

Data are accumulated and recorded for each patient before they are coordinated and submitted by Scannell to the central SECSG office, which is simultaneously receiving protocol results from other member institutions. The data are analyzed and the results are examined every six months. The final results are published in medical journals or presented at national meetings. If a treatment proves successful, it may become the standard treatment, and if a new drug is involved, it will become available commercially. "The beauty of clinical trials is that they tell you exactly what is the best way to treat these patients through scientific evaluation instead of improvisation," says Dr. Perez. "If our protocols are successful, physicians throughout the world will use them for treatment."

**Winning Combinations**

The SECSG has demonstrated success in establishing standard modes of treatment for particular types of cancer. Eight years ago, Dr. Perez helped design an SECSG protocol for small cell carcinoma of the lung (limited lung disease), which showed that patients who were treated with a combination of irradiation and chemotherapy responded better than those who were treated with irradiation alone. In 1978, Dr. Perez participated in generating another study for limited small cell carcinoma of the lung. The patients were all treated with irradiation to the brain and a combination of three drugs, cytoxan, Adriamycin and vincristine. They were randomized to receive or not chest irradiation. According to Dr. Perez, the study showed a significant improvement in tumor control and a 10 percent increase for two-year survival in the patients who received chest irradiation. Dr. Perez believes that the 1978 study will prove to be a milestone in the treatment of advanced cases of lung cancer.

"Researchers had not consistently been using chest irradiation because they were afraid that it would interfere with the chemotherapy," explains Dr. Perez. "I think this study will emphasize the beneficial role of radiation therapy in treating lung cancer."

In an active SECSG study, Dr. Meyer is studying cell kinetics (the rate of cell formation in cancer tissue) through flow cytometry (a technology that rapidly measures components of cells) as a method to predict the advancement of breast cancer. In this process cells are stained with a fluorescent dye that binds to their DNA. As the flow cytometer passes the cells rapidly by a laser, or other high intensity light source, a sensor picks up the fluorescent pulse, and the cell count is recorded on a histogram, a graphic printout. According to Dr. Meyer, the purpose of the study is to detect the number of S-phase cells (the time during a cell's life when it is duplicating its DNA and preparing to divide). Dr. Meyer believes that through flow cytometry, physicians may be able to evaluate how fast a cancer is growing, and, ultimately, better predict the disease process and the optimum method of treatment.

**Mutual Benefits**

The integration of health care disciplines through the SECSG has generated widespread interest not only among physicians, but other health care professionals. According to Dr. Philpott, an important outgrowth of cooperative research studies has been the evolution of specialized health care professionals, particularly oncology nurses. "Because of the complexity of cancer and the necessity of following protocols with precision, physicians needed well-trained and motivated registered nurses who were interested in specializing in the field," says Dr. Philpott. "Out of that need and their participation the specialty of oncology nursing evolved. Oncology nurses are now a professional entity in their own right and an important element in cancer treatment. They are essential in coordinating a patient's care whether the patient is on a protocol or not." Recently, nurse oncologists have become involved in cancer research to the point that they are generating their own protocols. Physician assistants, pharmacists and data managers are also active in SECSG.

According to Dr. Lyss, the benefits from SECSG for both health care professionals and cancer patients cannot be overstated. "We all have a slightly different approach to cancer treatment," notes Dr. Lyss. "But through the mechanism of the group we come together. We interact and we share ideas in a spirit of scientific inquiry and shared interests. The end result is better cancer care."

**Carlos Perez, M.D.**

**Alan Lyss, M.D.**
I've been looking forward to your coming here," the patient affirms her welcome to the woman who has just entered her hospital room. "None of my friends have had mastectomies — I just didn't know who I could talk to."

"Your doctor has asked me to come to see you. He thought I might be helpful and able to answer some of your questions. You see, four years ago, I had the same surgery you have had." The visitor, smiling, confident, is a volunteer with Reach-to-Recovery. The rehabilitation program for women who have had breast cancer is sponsored by the American Cancer Society and run in cooperation with hospitals throughout the country.

"We have a kit, supplied by Jewish Hospital and the American Cancer Society, that contains some things we'd like to share with you." The volunteer begins to explain a variety of pamphlets. One describes the founding and philosophy of Reach-to-Recovery, which aims at helping women meet their physical, emotional and cosmetic needs through the support of other women who have undergone the same procedure. Another booklet deals with clothing, bras and prostheses, one with feelings during recuperation. Letters in the packet addressed to the patient's husband or boyfriend and children stress that the mastectomy patient is the same woman she was before surgery.

During the course of the visit, the volunteer talks about arm and hand care necessary following the surgery which increases sensitivity in that part of the body, demonstrates exercises to aid the rehabilitation process and, perhaps most important, answers concerns with sensitivity and reference to her own experience.

"What am I going to wear home from the hospital?" the patient inquires. "Am I going to have to throw away all my clothes?"

"Every woman and every woman's surgery is different," the visitor responds. That message is used frequently to stress that no one should measure her case against that of another woman. The volunteer still manages to give encouragement. "I found that I could wear almost everything I wore before and I could adapt. If a blouse were a little low cut, for example, just a hook and eye fixed it up and I felt beautiful!"

The questions keep coming. "Will I be able to wear the bras I already have?" "When can I go back to exercising?" "Since I need chemotherapy and you didn't, is my case more serious than yours?" "When can I be fitted for a prosthesis?" "How did your husband really feel?"

Throughout, the volunteer — who has been matched as closely as possible to the patient's age, marital and familial status, degree of surgery and form of treatment — reassures. She refers medical questions back to the patient's physician and concentrates instead on the...
Dr. Joseph Eades explains new breast reconstruction procedures.

emotional side of recovery. “My husband was very concerned about me and what was happening to me,” she answers the key question. “It is important to communicate your feelings with your husband and, of course, he with you. Many times, a couple feels so much better and more comfortable with each other after fears and concerns are expressed. I think you’ll find it’s you — the total picture — that your husband loves and is proud of. You’ll feel just as beautiful and good about yourself afterwards. Remember — you’ve had major surgery and a major upheaval, and it takes time to adjust to the change, to get back to normal, to look at yourself and say, ‘I’m the same person.’ But that will happen for you.”

The volunteer’s very presence testifies to that fact. She closes by presenting the specially-designed Jodee bra, a gift from the Auxiliary and an added touch of Reach-to-Recovery visits at Jewish Hospital. “I’ve left my phone number in the back of one of the booklets. If there’s anything else you need, or want to discuss, please call me anytime.”

“Just seeing you has been enough for me,” observes the patient, given hope by the evidence that life can return to “normal” following mastectomy.

This model visit was presented by “patient” Cynthia Frohlichstein and “volunteer” Letty Korn to a gathering of 13 other attractive, well-dressed Reach-to-Recovery volunteers. Like Ms. Frohlichstein, who chairs the Auxiliary-sponsored program at Jewish Hospital, and Ms. Korn, all of them have had breast cancer. With the permission of their physicians, who determine that they are sufficiently adjusted to their situation to help other women deal with the fears and uncertainties following surgery, they participate in the support group. The “newest” member started a year ago; next year, the most senior veteran will have been free of her cancer and involved for a quarter of a century. They share emotional stability, warmth, courteousness and considerateness of others and their rights to privacy.

They met recently at the hospital for an update session organized by Frohlichstein to review the visitation process at Jewish Hospital and to hear about the new post-surgical procedures which are expanding the options for reconstruction.

In the past, women who had mastectomies were often told “be glad you’re alive,” noted Joseph W. Eades, chief of plastic surgery at Jewish Hospital, where he performs the latest breast reconstruction procedure, one which uses a woman’s own skin, fat, muscle and blood vessels to restore the missing part.

When a woman is suddenly informed she has breast cancer, her first thought is not about cos-
SUPPORT

The tummy tuck/reconstruction combination replaces the lost breast with a woman's own body tissue.

metics, but that she might die, Dr. Eades told the women, several of whom are his patients. “There’s severe fright and panic. Physicians were likewise alarmed,” he related about the initial reaction to diagnosis of breast cancer 15–20 years ago. “We used to see breast cancer so late that the outlook was very discouraging. Radical mastectomies were done in an attempt to save patients’ lives.”

Today physicians perform the radical surgery only in extreme cases, modified radical mastectomy being the preferred procedure. And once a woman recovers, and knows she is going to live, she has time to consider her physical situation. “Self-image is a total of mind, body and spirit, all of which need to be in balance,” observed Dr. Eades. For a woman who has lost a breast, this balance is upset. “Breasts in all societies are very significant, particularly in America,” said Dr. Eades. “We’ve gone overboard on how important it is to look like a female. And a mastectomy patient is missing a body part identified with womanhood.”

An external prosthesis, or breast form, can provide a natural contour in clothes. Recently a prosthesis has been developed that adheres to the skin, and stick-on nipples are available, but these aids are never considered part of the real self. Since the advent of silastic, or silicone rubber, it has been possible to implant a form either under the skin or under the chest muscle to create a new breast. The silastic prosthesis has been used for years to enlarge breasts, and the same material has been used to fashion heart valves and finger joints. However, some women have trouble with contraction, the inexplicable hardening around the implanted prosthesis.

Another new technique employs the tissue expander, an inflatable prosthesis. A sac with a filling tube are placed under the skin and chest muscle. This is subse-

quently inflated through the filling tube over a period of several weeks; the potential for contracture remains a problem.

However, as Dr. Eades explained, “We’d like to replace the tissue that’s missing. What’s missing here is skin, breast tissue and the pectoralis major muscle. So if we can replace all these things with an operation, that would be the thing to do.” Physicians developed a procedure that took the latissimus dorsi muscle, which the only other major incisions necessary are above the original surgical scar and at the inframammary fold, where the breast attaches to the chest. Essentially a combination tummy tuck and breast reconstruction, it requires two teams of physicians, one on the abdomen, one on the chest.

“Initially, we were reluctant to do this procedure, because it seemed to be too involved,” Dr. Eades commented about the operation first performed in 1980. The operation takes from four to seven hours. But today it is common to have prolonged surgical operating times for reimplantation and cardiovascular surgery. And anesthesia has adjusted to those demands.

The tummy tuck/breast reconstruction is now often the choice. “The fatty tissue of the abdomen is soft, and stays that way forever, so you don’t have to worry about protheses getting hard. It minimizes the scars. It will rise naturally with the elevation of the arms — it gives you a breast that has your own tissue and has flow like your own tissue.” Plastic surgeons at Jewish Hospital are now using the procedure for any appropriate case.

“We’re really trying to heal the patient the best we can,” noted Dr. Eades, “to reestablish the balance of the mind, spirit and body.”

For more information on reconstructive surgery at Jewish Hospital, call the department of plastic surgery, 454-7170. For more information on Reach-to-Recovery, call the Jewish Hospital Auxiliary Office, 454-7130, or the American Cancer Society, 567-9730.
Gradually, the scalpel is being replaced by sophisticated, high technology equipment designed for specific applications. Among them is the CUSA (Cavitron Ultrasonic Aspirator), an instrument used at Jewish Hospital to perform surgery on liver tumors. The results being achieved are not normally associated with conventional surgery. Using the ultrasonically-generated power and superior control of the CUSA, Kenneth Bennett, M.D., department of surgery and assistant professor of surgery at Washington University School of Medicine, is currently removing liver tumors (of which there are 30,000 new cases diagnosed in the U.S. each year), establishing Jewish Hospital as one of the few institutions in the country with such a capability. Inquiries about the procedure constantly flow into Dr. Bennett's office. Recently he has consulted on patient cases in Seattle, Chicago, Florida, Nebraska, Michigan and Las Vegas. Dr. Bennett studied CUSA surgical techniques at the National Cancer Institute of the National Institutes of Health in Bethesda, Maryland, and at New York Medical College in 1982.

The CUSA, first used as a tool in ophthalmic surgery, resembles a microscopic jackhammer. "It pounds away at the tissue with 23,000 beats per second," explains Dr. Bennett. "It heats up tissue and at the same time aspirates [sucks away] destroyed tissue." Operated by foot pedals, the CUSA selects tissue by its water content. Tissues highest in water content, such as liver cells, are susceptible to the CUSA's touch while blood vessels, which are low in water, are not. Thus, blood vessels can easily be separated from the tissue and clamped off so that the tumorous section of the liver can be exposed and removed with a minimum of the trauma that may occur following the uncontrolled bleeding often associated with other surgical techniques. Also, given the pudding-like consistency of the tissue, the greater tactile control of the CUSA allows for less fragmentation of the liver than is seen in conventional surgery. "It gives us confidence to tackle tumors in the liver that we never would have touched before," comments Dr. Bennett.

A liver resection involves cutting out the cancerous tissue and removing that section of the liver. It is important to note that the liver is one of three regenerative systems in the body, the others being nerve and bone,
so removal of a section will only impair liver function for a short time until it regenerates.

The springboard for development of such sophisticated surgical equipment was the space race of the 1960s. "It all dates to one major event," explains Dr. Bennett. "It was the day John F. Kennedy announced that we would land a man on the moon within the decade. He poured vast amounts of money and manpower into the development of technology. Scientists had to readjust their thinking and miniaturize equipment. That, plus the advent of the computer, has made all this possible. Eventually, we're going to be doing things we just dream about today."

Dr. Bennett observed the CUSA surgical technique at a microsurgical meeting in 1978 and again at a conference on gastrointestinal diseases in 1982. He convinced Jewish Hospital financial decision makers of the importance and ability of the $50,000 piece of equipment, and in late 1982, it was purchased. He operated on his first patient in December, 1982, and Dr. Bennett is now confident that as referring physicians see the benefits of CUSA surgery, his case load will continue to increase.

"In the past, we rarely tackled liver metastases [spreading malignancies]. We thought that once cancer hit the liver, it was incurable," comments Dr. Bennett. "We're taking a much more aggressive approach to liver metastases at this hospital. We're now in the position of convincing other physicians that some patients should have surgery. Today, no patient should be discarded
since we know that when we are able to excise tumors in the liver, the patient has a good possibility of being cured. There have been long-term survivors.

“We resect tumors in the liver for two reasons. One is to cure the patient, if possible. The other is essentially palliative. If a tumorous mass is causing symptoms and you know the patient cannot be cured, a resection could still help reduce the symptoms,” explains Dr. Bennett.

Recently, the physician credited with developing the technique, W. John B. Hodgson, M.S. (London), FRCS (England), FACS, visited Jewish Hospital to assist Dr. Bennett in offering a workshop on the CUSA procedure for regional gastrointestinal surgeons. Dr. Hodgson has performed more CUSA liver tumor surgeries than any other physician and was instrumental in convincing Cooper Laser-Sonics, the CUSA’s manufacturer, to develop a CUSA of the right size for gastrointestinal work. Jewish Hospital joins only two other institutions in the country in providing workshops with the ultrasonic tool.

Dr. Bennett is in the process of completing a protocol for treatment of liver tumors at Jewish Hospital. “This is a teaching hospital in an academic setting,” he notes. “It is not sufficient for us to just announce a procedure and start doing it. We should be able to derive data from it and be able to state what works, what sometimes works, and what does not work. Then we publish our data and let everyone learn from it. That’s the essence of an academic experience.” The protocol will include a liver resection using the CUSA or the implantation of the hepatic pump depending on the location and number of tumors (see “Catching Up with Cancer,” page 7 of this issue, and “Hitting the Target with Chemotherapy,” in the November/December 1983 issue of 216). Liver tumors are most often the results of colon cancer that has metastasized to the liver through the hepatic artery, the blood source to the colon from the liver.

If a patient has four or fewer tumors centered in a resectable area of the liver, Dr. Bennett would recommend resection to cut out the tumors. To perform the resection, there must also be no other tumors in the body and the liver must be healthy, save for the tumorous section. If the tumors are numerous and have spread throughout the liver, the hepatic pump, which dispenses measured doses of chemotherapy into the liver, would be utilized.

“At long last, we are making an impact on cancer. Things have been static for a long, long time,” comments Dr. Bennett. “In the past five years, we have seen all kinds of changes. And now, those changes are coming quicker and quicker. It’s a very exciting time in cancer work. The next ten years are going to be like the last 100 in terms of medical advances.”
Why take chances with your life when you can maximize your opportunities to win against cancer? The Jewish Hospital Auxiliary wants to help you know your opponent with a series of seminars and panel discussions given by a first-rate group of medical practitioners, and with special bonus points that will help you plan a winning strategy for prevention, detection and treatment.

You can get some CANCER ANSWERS on Sunday, October 28, at Jewish Hospital, when the Auxiliary sponsors a markedly upbeat approach to the disease which may be preventable and which can be successfully treated. Playing the game could provide you with some of the best free tips you have ever received.

Nabil Abboud, M.D., attended a Society of Cardiac Anesthesiologists meeting on cardiac anesthesia May 6-9 in Boston, Massachusetts.

Charles Anderson, M.D., co-authored a paper on “Prostaglandin Synthesis Associated with Renal Cell Graft Rejection in the Dog” that appeared in the May 1984 issue of Transplantation. Dr. Anderson spoke on “Immunosuppression and Blood Transfusion before Kidney Transplantation” to the American Society of Transplant Surgeons June 1 in Chicago, Illinois. On June 8, he spoke on “Management of Thoraco Abdominal Aneurysms” to the Missouri Chapter of the American College of Surgeons in St. Louis.

C. Elliott Bell, Jr., M.D., co-authored a paper, “Allergy Skin Testing of Multiple Patients: Should No Longer be Performed with a Common Syringe,” that appeared in a May 1984 issue of the New England Journal of Medicine. He also co-authored a paper “Generation of Monoclonal Antibodies Against Human Neuron Specific Enolase” presented to the Third Annual Congress for Hybridoma Research February 19-22 in San Diego, California.

Arnold Block, M.D., attended an American Psychiatric Association meeting on “American Psychiatry: A Dynamic Mosaic” May 5-11 in Los Angeles, California.

George Broze, M.D., co-authored a paper on “The Number of Receptors for Factor VII Correlates with the Ability of Cultured Cells to Initiate Coagulation” that appeared in a 1984 issue of Blood. He co-authored a paper on “Human Protein Z” that was published in a 1984 issue of Journal of Clinical Investigation.

William J. Catalona, M.D., was appointed chief of the division of urology at Washington University School of Medicine. He presented a paper on “Clinical Studies of Intravesical BCG Therapy” at the G.U. Surgeons Meeting March 2-4 in Boca Raton, Florida. Dr. Catalona presented two papers, “Technique of Radical Prostatectomy: Preservation of Potency and Continence” and “When Is Lymphadenectomy Necessary?,” at the Cleveland Clinic Seminar March 8-9 in Cleveland, Ohio. At the Maricopa Medical Center and Phoenix Urologic Society Meeting March 17-18 in Phoenix, Arizona, he participated in two panel discussions, “Management of Superficial Bladder Cancer” and “Management of Invasive and Advanced Bladder Cancer.” He also presented a paper at the meeting on “Radical Retropubic Prostatectomy with Preservation of Sexual Potency.” At the University of Missouri Urological Society held March 22-23 in Kansas City, Missouri, Dr. Catalona presented papers on “Indications for Radical Prostatectomy,” “Technique of Radical Prostatectomy with Preservation of Sexual Potency,” and “Management of Superficial Bladder Cancer.”

John P. Connors, M.D., spoke on “Coronary Bypass Surgery” to the Missouri Medical Association March 30 in St. Louis.

Michael J. Gast, M.D., co-authored an abstract on “The Effect of Pregnancy and Related Complications on Serum Angiotensin-Converting Enzyme Activity” presented to the 4th Pittsburgh, Pennsylvania; and Paul H. Sugarbaker, M.D., head of the colo-rectal cancer section, surgery branch, of the National Cancer Institute at the National Institutes of Health, in Bethesda, Maryland. Faculty from Jewish Hospital included: Kenneth J. Bennett, M.D., assistant professor of surgery; David L. Bradley, Pharm.D., associate director, pharmacy; James W. Fleshman, M.D., instructor in surgery; Robert D. Fry, M.D., instructor in surgery; Albert M. Hamerman, M.D., research instructor in radiology; John D. Hirsch, M.D., instructor in surgery; Ira J. Kodner, M.D., assistant professor of surgery; Steven S. Lefrak, associate professor of medicine; Gary A. Ratkin, M.D., assistant professor of medicine; Burton A. Shatz, M.D., associate professor of medicine; and William F. Stenson, M.D., assistant professor of medicine.

Above, program coordinator Kenneth Bennett, M.D. (right), with guest faculty member Paul H. Sugarbaker, M.D.

Jerome J. Gilden, M.D., attended a bio-skills workshop on “Cementless Total Knee and Hip Arthroplasty” presented by The Johns Hopkins University School of Medicine May 20-23 in Williamsburg, Virginia.

Dr. Gilden attended the Mid-America Orthopaedic Association annual meeting April 24-28 in Bermuda. He also attended the 31st annual meeting of the Missouri State Orthopedic Association June 1-3 at the Lodge of the Four Seasons in Lake Ozark, Missouri.

Dr. Gilden attended an international symposium on “The New Generation: Total Knee Replacement” June 21-22 in St. Louis.

Jordan Ginsburg, M.D., spoke on “What is Sports Medicine?” to the University of Louisville department of family practice May 31 in Louisville, Kentucky. Dr. Ginsburg attended the American Academy of Orthopedic Surgeons “Arthroscopy Update 1984” meeting in April in Marco Island, Florida.

M. Gilbert Grand, M.D., co-authored a paper on “Choroidal Osteoma: Treatment of Associated Subretinal Neovascular Membranes” published in a 1984 issue of Retina. In April, Dr. Grand presented a lecture on “Trans parsplana vitrectomy in the Management of ‘Selected’ Rhegmatogenous Retinal Detachment” at the Wilmer Ophthalmic Institute at The Johns Hopkins University, Baltimore, Maryland.

WHAT’S ON T.V.? — Patients who need education about their conditions or procedures they are scheduled to undergo need only go as far as the television set in their rooms. Two patient education channels, known as KARE-TV, are operational.

Bob Morrison, media specialist, and a committee of health care professionals, screened hundreds of educational films available on the market to select the ones of the highest quality that would benefit as many patients as possible. Using data involving the most common reasons for hospitalization at Jewish Hospital, they compiled a list of the types of films they thought Jewish Hospital should offer.

“Almost all the programs relate to specific disorders, most commonly heart disease and diabetes, or hospital procedures,” comments Morrison.

“Other programs are on preventive medicine or are for new parents.” It is possible to evaluate how often a film is watched, using a computer that monitors televisions by room number, channel and time of operation. If a nurse wants to make certain that a patient watched a recommended program, he or she need only call to check the computer list.

While the purpose of the programming is to facilitate education, it also saves the patients from asking questions they might find awkward or embarrassing, says Morrison. The patient television program was originated as a project of the Associates in Medicine.

Patients may watch these programs without cost on the television sets provided in their rooms.

Randy L. Hammer, Ph.D., presented his couples psychotherapy format to the national meeting of AASECT in June held in Boston, Massachusetts. The therapy program demonstrates Dr. Hammer’s methodology of treating couples having relationship and/or sexual difficulties.

Peter Herscovitch, M.D., co-presented a paper on “What is the Correct Value for the Partition Coefficient for Water?” to the Society of Nuclear Medicine meeting June 5-8 in Los Angeles, California.

Alex Kaplan, M.D., co-authored a paper “The Dying Psychotherapist” presented at the Washington University department of psychiatry grand...
rounds March 27. A book review authored by Dr. Kaplan of The Therapeutic Revolution: From Mesmer to Freud written by

HEALTH SCREENINGS — If you turn on your television to Channel 9 (KETC-TV) at 7:30 p.m. on a Sunday evening or 11:30 a.m. on a Saturday morning, you might see a familiar face or two from Jewish Hospital. They will be part of a 26-segment series of programs produced for the Washington University Medical Center by MedStar Communications, Inc., an independent production company. Called “Health Matters,” the series is designed to inform viewers of medical advances and help them become more aware of health care services.

Topics were chosen by medical center members, Jewish, Barnes and Children’s hospitals, Mallinckrodt Institute of Radiology and the Washington University School of Medicine. Each segment will include studio interviews with health care professionals from the medical center and documentary-style background footage, graphics, patient interviews and film sequences of medical or surgical procedures.

Among the programs focused on Jewish Hospital and featuring our experts in the appropriate fields are those dealing with aging, depression, cancer treatments, infertility, rehabilitation, colo-rectal cancer and modern childbirth. Other topics to be covered in the series include space age surgery, child safety, breast cancer, advances in diabetes, and smoking. The first segment airs October 7.

SITTING WITH THE BEST — Jewish Hospital is conducting a nationwide search to fill a new professional chair in cardiovascular surgery created by a $1 million endowment fund from the Shoenberg Foundation and members of the Shoenberg family. The John M. Shoenberg Chair in Cardiac Surgery will be offered to an outstanding cardiovascular surgeon in the United States, who will also fill the position of director of cardiovascular surgery for the hospital. Other cardiovascular surgeons are also being recruited to replace the physicians who are leaving the academic medical center, effective December 1, to enter private practice at another hospital.

The chair will serve as an added attraction to the fine medical reputations of the Washington University Medical Center and Jewish Hospital, where cardiovascular surgery is a strong program. In the last year, doctors here performed nearly 800 open heart surgery procedures, 1,500 cardiac catheterization procedures, and 300 angioplasties (a technique in which a balloon catheter dilates the clogged arteries serving the heart). The hospital remains committed to maintaining its level of service in cardiac care.

Robert Kleiger, M.D., attended the American College of Cardiology “Ambulatory Electrocardiography: Clinical State-of-the-Art” program June 11-13 at the Heart House in Bethesda, Maryland. Dr. Kleiger spoke on “Pulmonary Disease – Value of Ambulatory Electrocardiography in COPD and the Sleep-Apneic Syndrome” and “Artifacts and Pitfalls in Interpretation of Ambulatory Electrocardiograms.”

Steve Lauter, M.D., spoke on “The Treatment of the Patient with Resistant Rheumatoid Arthritis” to the Scott Air Force Base medical staff March 6. He attended a seminar in advanced rheumatology March 19-23 in New York, New York. Dr. Lauter spoke to the St. Louis chapter of the American Academy of Family Practice on “The Management of Acute and Chronic Pain in Arthritis” on April 5 in St. Louis.

Ervin Lipschitz, M.D., attended the American College of Health Association meeting on “Communication is our Future” held April 25-28 in Atlanta, Georgia.

Alan P. Lyss, M.D., presented a paper on “Metastatic Germ Cell Testicular Carcinoma” at the June Medical Grand Rounds. Dr. Lyss attended the Southeastern Cancer Study Group meeting on cancer research June 10-16 in Hilton Head, South Carolina. The American Cancer Society appointed him a junior faculty clinical fellow for 1984-85.

Charles Mannis, M.D., spoke on “Soccer Injuries — Care and Prevention” to the Missouri Youth Soccer Coaches Association June 4 in St. Louis.

Harry Margraf, Ph.D., co-presented a paper on “Silver-Monoclonal Antibody Complexes: Potential New Immunotoxins” to the American Association for Cancer Research May 9-12 in Toronto, Canada.

Norman Matulef, Ph.D., was appointed to the task force on Health Care for the Indigent with Confluence, an area-wide citizens group.

John S. Meyer, M.D., co-authored a paper on “Breast Carcinoma Heterogeneity” presented to the Cell Kinetics Society March 24 in Memphis, Tennessee. Dr. Meyer spoke on “Prognosis of Breast Carcinoma” at the Milton S. Hershey Medical Center on May 29 in Hershey, Pennsylvania.

Barry Milder, M.D., presented a paper on “Ophthalmoplegia in Juvenile Rheumatoid Arthritis” to the American Association of Certified Orthoptists at the Midwest Meeting held May 17 in Detroit, Michigan.

Marvin Mishkin, M.D., was elected president of the St. Louis Orthopedic Society for 1984-85.

Carlos Perez, M.D., spoke on “Biological and Physical Basis of Hyperthermia in Cancer,” “Hyperthermia in Cancer Therapy: Clinical Experience and Results,” and “Radiation Therapy in Definitive Management of Carcinoma of the Prostate” at the University of Texas Grand Rounds April 5-6 in San Antonio, Texas. At the UCLA Winter Oncology Conference, Dr. Perez spoke on “Radiation therapy’s Role in Breast Cancer” in Los Angeles, California, March 1-3. He also participated in two panel discussions, “Gynecologic Cancer” and “Lung and Gastrointestinal Cancers.” To the American Cancer Society workshop on Hyperthermia in Cancer Treatment March 19-21.
in Tucson, Arizona, Dr. Perez spoke on “Temperature-time Doses and Tumor Control.” On April 14, Dr. Perez attended Cancer Update 1984 in Merrillville, Indiana, and spoke on “Role of Radiation Therapy in Ovarian Cancer” and “Preoperative or Postoperative Radiation Therapy in Bladder Carcinoma.” He spoke on “Patterns of Failure in Localized, Unresectable Non-Oat Cell Carcinoma of the Lung Treated by Radiation Therapy” at the American Society of Clinical Oncology meeting May 6-8 in Toronto, Canada. “Hyperthermia: A Potentially Effective New Modality for Cancer Therapy” was the topic of his talk at Mt. Sinai Medical Center May 22 in Cleveland, Ohio. He spoke on “Carcinoma of the Lung: Dose-Time Parameters” at the IASLC Workshop of Radiotherapy for Lung Cancer June 26-30 in Cambridge, England. At the 4th International Symposium on Hyperthermia Oncology in Aarhus, Denmark, July 2-6, Dr. Perez spoke on “Hyperthermia and Radiation” and “Clinical Results with Irradiation and Local Microwave Hyperthermia in Cancer.”

Arthur Prensky, M.D., authored a paper on “Neurologic Problems Associated with Acute Lymphocytic Leukemia in Childhood” published in the May 1984 issue of Texas Medicine. Dr. Prensky gave the second Mark Platt Memorial Lecture at the National Children’s Hospital on May 14 in Washington, D.C. He spoke on “Recent Advances in Epilepsy” at New York University May 18 in New York, New York. Dr. Prensky was appointed to the editorial board of Pediatric Neurology in Minneapolis, Minnesota.

Timothy Ratliff, Ph.D., received a grant from the National Cancer Institute of $372,000 for a three-year study of “Mechanisms of Surgical Adjuvant Intravesical BCG Therapy.” Dr. Ratliff was appointed research associate professor of surgery at Washington University School of Medicine.

Kenneth Russ, Ph.D., attended the 15th annual meeting of the Biofeedback Society of America in Albuquerque, New Mexico, March 23-28. At the meeting, he attended a workshop on “Biofeedback Applications for Patients with Musculo-Skeletal and Neuromuscular Disorders.” He also attended the Peitan Neuro-psychology Seminars Workshop in Human Clinical Neuropsychology and an Advanced Course on Neurological Inferences June 11-15 in Newport Beach, California.

Moisy Shopper, M.D., spoke on “Approaching the Resistant Patient” to the St. Louis County Juvenile Justice Association January 4 in St. Louis. Dr. Shopper appeared on the CBS/KMNO radio show, Parker Wheatley’s “The People Speak” on April 29.

Peter Smith, M.D., Ph.D., co-authored a paper “Management of Aneurysms of the Petrous Portion of the Internal Carotid Artery by Resection and Primary Anastomosis” published in a 1983 issue of The Laryngoscope. Dr. Smith also co-authored two papers soon to be published in The Laryngoscope, “Clinical Aspects of Hemangiomas of the Skull Base,” and “The Diagnosis and Management of Catecholamine Secret ing Glomus Tumors.” He also co-authored a paper on “Repair of Head and Neck Defects with Thin and Double-Lined Pectoralis Flaps” to be published in an upcoming issue of Archives of Otolaryngology.

Jules Snitzer, DDS, attended the Missouri Society of Periodontology annual meeting April 14 in Kansas City, Missouri. He attended a research meeting of the International Association for Dental Research March 15-18 in Dallas, Texas. Dr. Snitzer was elected secretary of the Midwest Society of Periodontology annual meeting held February 17-19 in Chicago, Illinois.

Stanley Thawley, M.D.,
“Abdominal Relapses in Wilms Tumor” to the American Radium Society in March 1984 in San Diego, California.

Bruce Walz, M.D., spoke on “Early Detection and Definitive Radiation Treatment of Breast Cancer” to a meeting of SHARE June 2 on the Washington University campus.

Todd H. Wasserman, M.D., attended the Radiation Research Society Meeting March 25-29 in Orlando, Florida. He is on the planning committee for the Fall 1986 International Symposium on Chemical Modifiers of Radiation Effect. From April 15-17, Dr. Wasserman met with representatives of the Varian Corporation in Palm Springs, California, to participate in activities regarding the development of radiation therapy equipment. He visited the National Cancer Institute at Howard University in Washington, D.C., April 19-20 to view programs in intraoperative radiation. Dr. Wasserman participated in an interdisciplinary conference on non-Hodgkin’s lymphoma May 16 at Barners Hospital. He spoke on “Current Treatments with Radiation Therapy.” Dr. Wasserman attended a conference on “Elements of Excellence in Cancer Patient Care” at the McDowell Cancer Network of the University of Kentucky, Lexington, Kentucky, on May 17. There, he spoke on “Perspective of the Radiation Oncologist.” At the semi-annual meeting of the Radiation Therapy Oncology Group June 6-8, Dr. Wasserman chaired the committee on Chemical Modifiers of Radiation Therapy.

POISON — The Jewish Hospital pharmacy, in cooperation with the St. Louis Regional Poison Center, has had a reaction against the large number of accidental poisonings in the United States and the potential of serious harm to children as a result of poisoning. It has instituted a poison prevention education program directed at new parents.

At the time of discharge, each new parent is given a packet containing a letter explaining the program, a series of “poison tips,” a set of “Mr. Yuk” stickers labeled with the telephone number of the St. Louis Regional Poison Center (314-772-5200) and a bottle of syrup of ipecac, used to induce vomiting after ingestion of certain types of poison.

The program is part of the pharmacy’s dedication to providing pertinent medication-related information and safe and effective drug products which will maximize the patient’s benefit from his/her medication therapy.

was a guest editor for a symposium on sleep apnea for the May 1984 Ear, Nose and Throat Journal. As guest faculty for the University of Michigan head and neck oncology post-graduate course April 1-6 in Ann Arbor, Michigan, Dr. Thawley spoke on “Modified vs. Radical Neck Dissection,” “Parotid Cancer,” “Regional Flaps of the Head and Neck,” and “Tumors of the Pharynx and Larynx.”

Patrick R. M. Thomas, M.D., co-authored a paper on “An Analysis of Neuroblastoma At a Single Institution” published in the May 15 issue of Cancer. Dr. Thomas spoke on
Effect and participated in other chemical research committee activities including developments in intraoperative radiation therapy. On June 1, Dr. Wasserman participated in a meeting on organizing research projects on chemical modifiers and radiation under the auspices of the National Cancer Institute in Bethesda, Maryland. He attended the Second International Conference of Lymphomas June 13-16 where he presented a paper on "The Treatment of Diffuse Large Cell Lymphomas of the Head and Neck Region Treated with Radiation Only." He co-authored a paper presented at the conference by Bharat Mittal, M.D., on "Analysis of Gastric Lymphomas."

Gary Well, M.D., co-authored a paper on "Monoclonal antibody-based assay for parasite antigenemia in Dirofilaria immitis — infected dogs" presented to the American Association of Immunologists June 5 in St. Louis.

Robert Weinhaus, M.D., attended the annual meeting of the American Psychiatric Association May 5-11 in Los Angeles, California. Dr. Weinhaus was accredited as a diplomate in psychiatry by the American Board of Psychiatry and Neurology.

J. Lester Zeffren, M.D., attended the American Society of Clinical Oncology meeting on Cancer Research May 6-8 in Toronto, Canada.

---

**LEARNING TO COPE**

"How well a person will cope with a chronic illness has more to do with how that person has reacted to crises or illnesses in the past than the specific factors of the illness," Barry A. Hong, Ph.D., told the audience of the Auxiliary-sponsored PEP (Parkinson's Educational Program) program held July 22 at the hospital. Dr. Hong, assistant professor of medical psychology at Washington University School of Medicine and coordinator of inpatient psychiatry at Jewish Hospital, spoke on "Psychological Aspects of Coping with Parkinson's Disease."

"Your ability to cope is really not gauged by any single thing, but by many factors," explained Dr. Hong. "The kind of family support you have, the kinds of feelings you had before your illness, your stage of life and your financial situation all enter into your attitude.

Coping and adjusting to a chronic illness is also very inconsistent at the beginning as you make some early resolutions about how to deal with it."

Dr. Hong discussed three stages of coping mechanisms and how they correlate with the stages of the illness. Labeled as infancy, adolescence and maturity, the stages reflect growing realizations about the illness and a patient's ability to retain independence and self-esteem.

"With the diagnosis of Parkinson's or another chronic illness, an initial phase of denial, characterized by feelings of "It can't happen to me," is usually followed by a mourning process for the loss of one's job, income, independence, status within the family and other changes that might occur. "In many ways this is a healthy process and a very normal, natural thing to understand," noted Dr. Hong. During this early stage, a patient also is likely to spend a great deal of energy researching and learning about the illness.

The adolescent phase is often characterized by a struggle with the physician and family members toward achieving a balance of the old and the new — what one's personal needs are and will be and how the patient wants to meet them. According to Dr. Hong, roles within the family are often reexamined, and new behaviors are experimented with until the patient reaches the goal of this period, which is to reconcile oneself to the new knowledge of the illness.

During the third phase of learning to cope, known as maturity, "you become an expert on what is good for you and what is not. Your outlook may change, you may embrace each day for its potential, and come to anticipate problems rather than just react to them," said Dr. Hong. "You're the one who makes the decisions. You also live on with hope about research and treatment, in order to meet the day's challenge.

"Coping is highly individual. A person should not feel compelled to do what others do, although learning about others' coping strategies through support groups like PEP is very helpful," stressed Dr. Hong. "Help is available and you shouldn't be ashamed to ask for it from your family, your support group and your physician. Keeping the lines of communication open is one of the most helpful things you can do."

PEP programs, sponsored by the Jewish Hospital Auxiliary and organized by chairperson Susan Levin (Mrs. Robert), meet three times a year in the hospital's Steinberg Amphitheater. The National Parkinson Foundation provides a toll-free telephone number. It operates Monday through Friday, 8 a.m. to 4 p.m. at 1-800-327-4545.

For further information on PEP programs, contact the Auxiliary office at 454-7130.

---

TO MANAGE THE MEDIA — Joanne E. Spiegel has joined the community relations department at Jewish Hospital in the position of media coordinator. She will act as a liaison between the media and hospital personnel.

She formerly was a member of the News Services staff at the University of Missouri-Columbia where she was responsible for meeting the publicity needs of four of the University's colleges and several departments. Prior to that, she worked as a reporter and editor for daily newspapers in Michigan and Oklahoma, and as an editor for weekly newspapers in the metropolitan St. Louis area.

Ms. Spiegel earned both bachelor's and master's degrees in journalism from Northwestern University in Evanston, Illinois, following graduation from Horton Watkins (Ladue) High School.

27
In an effort to provide high-quality medical service, Jewish Hospital at Washington University Medical Center continually purchases new equipment. Because of the ever-increasing costs of medical supplies, gifts to the hospital, whether large or small, are greatly appreciated.

The Shopping List is a special feature presented to give the community an idea of the many different pieces of equipment every department requires to function efficiently. The list designates areas in which contributions are most necessary to help offset the high costs of the items (cited with their approximate prices), and allows prospective donors to choose a specific gift if they so desire.

The need exists. Your generosity could help save a life.

For more information on the Shopping List, contact the development office, 454-7250.

**Recording System Relays Radiology Results**

With the implementation of a digital recording system in the department of medical diagnostic imaging, physicians now have immediate access to their patients’ X-ray results. Previously, after a patient had a radiology series, the radiologist first interpreted the film, then dictated his report, which had to be transcribed by the secretarial staff. When the patient’s physician contacted the department, the typed report was located and read over the telephone. If the report had not been transcribed, the film was located and a radiologist re-interpreted the tests verbally to the physician.

Under the new system, physicians will be able to hear X-ray results immediately after they are dictated by the radiologist. Each physician is assigned a number which is activated by touch-tone telephone giving the physician access to the digital recording system. The physician then enters an identifier number — assigned to each patient — which gives him the patient’s X-ray results as they were dictated by the radiologist.

According to Vincent Lovett, chief radiologic technologist, the new system allows physicians and staff to utilize their time more efficiently. Mr. Lovett believes that the digital recording system may also reduce the number of tests for patients. “If physicians know that they can obtain results immediately, they might want to reduce the number of initial tests. Then if the immediate results indicate that the patient needs follow-up tests, the physician can order them without prolonging the patient’s hospital stay,” says Lovett.

Lovett believes the new system will also be beneficial for resident physicians. “For the first time, physicians in training will have access to X-ray reports on a 24-hour basis. If they need to review a patient’s case, the X-ray results will always be available to them.”

HI-LOW Exam Table (for general examination).......................... $1,800

**Surgical Clinical Practice**

Procto Exam Table (for Proctology exams)............................. $6,000

**Emergency Room**

Defibrillator/Monitor (for heart attack victims).................. $7,900

**Graphics Lab**

ECG Controller (for analyzing heart rhythms)...................... $800

That’s Jewish Hospital’s neighborhood, the Central West End. Developed between the 1890s and 1930s in grand European styling, it has been redeveloped in the 1970s and 1980s into a St. Louis showplace. The Washington University Medical Center Redevelopment Corporation deserves much of the credit for the stunning rehabilitation. The revitalization of the historic district — complete with street lamps, architectural details, sidewalk seating and residential splendor — was born out of concern that the area surrounding one of America’s top medical, teaching and research complexes be attractive and appealing to the people who work and visit here.

Galleries, restaurants, mansions and more than 100 shops specializing in everything from coffee beans to shell crafts line the 10-block-long area. Just west of it, Forest Park’s lawns dip and turn past some of the city’s most beloved attractions. And it’s all just outside Jewish Hospital’s doors, providing an often welcome diversion for the friends and relatives of our patients.

This map is designed to convey the spirit of our surroundings. We hope you enjoy them during your visit with us.
NOTE: The locations of Central West End establishments shown on the map are approximate. For exact locations, please refer to the specific addresses given in the listings. The closest cross street for each is indicated in parentheses.
WHERE TO EAT
The question fast becomes “what to eat,” with the variety of cuisine served up in the neighborhood. Inexpensive eateries will cost you less than $5, moderate dining spots between $5 and $8, and expensive restaurants will run between $9 and $18.

AVE'S RESTAURANT
steaks, sandwiches, pastas
4590 Laclede (Euclid)

**HAAGEN-DAZS**
ice cream, soft drinks
2 Maryland Plaza (Euclid)
361-4955
11:00 am – 12:00 am Mon - Fri
11:00 am – 1:00 am Sat – Sun
Moderate

**WHERE TO STAY**
Several nearby hotels offer accommodations convenient to the hospital.

**CHASE-PARK PLAZA**
special rates on availability basis
212 North Kingshighway (Lindell)
361-2500

**FOREST PARK HOTEL**
special rates with Courtesy Card* transportation to and from hospital
4910 West Pine (Euclid)
361-3500

**INN AT THE PARK**
special rates with Courtesy Card* transportation to and from hospital
4630 Lindell (Euclid)
367-7500

**QUALITY INN HOTEL**
5120 Oakland (S. Kingshighway)
531-7070

**QUEENY TOWER**
Barnes Hospital Plaza
362-5301

**WHERE TO FIND US**
Major highway connectors make Jewish Hospital easily accessible from any part of St. Louis and the surrounding region. Situated at the corner of Kingshighway and Forest Park Boulevard, it is a 20-minute drive from West County communities, less than two miles north of Highway 44 and just a few blocks north of Highway 40. It is also easily reached from U.S. 66, I-55, I-70 and Illinois 3.

**WHERE TO PARK**
The hospital has an on-site parking garage monitored 24 hours a day. It provides direct access into the hospital building. Valet parking is available at the Shoenerg entrance 9 am – 9 pm Monday through Friday at a cost of $1 plus the regular parking garage fee. On request, the hospital security department will provide escort service between the hospital and your car.

**FOREST PARK BOAT HOUSE**
slow pleasure boating on 22-acre lake
Government Drive (between MUNY Opera and Zoo)
367-3423
11:00 am – 8:30 pm seven days
$5/hour, electric boat for 1 or 2 people
$4/hour, canoe or rowboats for 1 or 2 people
$2 deposit

**JEFFERSON MEMORIAL**
Missouri Historical Society collections
Lindell and Skinker
361-1424
9:30 am – 4:45 pm Tues – Sun
Free

**JEWEL BOX**
floral greenhouse
Wells Drive
534-9433
9:00 am – 5:00 pm seven days
50 cents admission/
free 9:00 am – 12:00 pm
Mon – Tues

**McDONNELL PLANETARIUM**
star shows, astronomy exhibits
5100 Clayton Road (Forest Park)
652-2125

**MUNICIPAL THEATER ASSOCIATION OF ST. LOUIS (MUNY OPERA)**
outdoor summer musical theater
Forest Park (follow the signs)
361-1900 – general office
367-8686 – ticket sales

Anyone can open a drawing account by mailing a deposit of at least $25 to the Tribute Fund, 216 South Kingshighway, P.O. Box 14109, St. Louis, MO 63178. Once the account is open, the donor can call 454-7242 anytime he or she wishes to make a tribute. Tributes can commemorate any occasion—birthday, promotion, birth, Bar Mitzvah or marriage. They can also be used to express appreciation or sympathy. The sender may specify that the money be put into a special fund. A notice is immediately sent to the recipient and the amount, a minimum of $3, is deducted from the balance of the account. So that all the money can be used for the purpose intended, the drawing account holder will not be sent a thank you acknowledgement.

Donors who do not have drawing accounts can send checks payable to The Jewish Hospital Tribute Fund to the address given above. When a tribute is made this way, both the sender and recipient receive an acknowledgement of the donation.

The following contributions were received from June 4 to August 10, 1984. Any contributions received after August 10 will be listed in the next issue of 216.

314-454-7000

The Jewish Hospital of St. Louis is a 600-bed acute care teaching hospital affiliated with Washington University School of Medicine. Located in the Central West End of St. Louis, it is dedicated to distinctive patient care and medically-advanced research. The medical staff of 635 physicians and dentists comprise a group of full-time academic faculty and private physicians. These professionals are reinforced by a house staff of 150 residents and interns, along with nurses and technicians, service and support personnel to deliver 24-hour high quality patient care. The Jewish Hospital of St. Louis is fully accredited by the Joint Commission on Accreditation of Hospitals.

The Jewish Hospital publications department provides a reprint service for any article appearing in this magazine. It is offered free of charge as a community and physicians’ service. Call 454-7239 for more information or a reprint of your choice.
