S5 Fig. LC MS/MS-CID showing hexosylation at Ser519 peptide ADLESLIS$_{519}$KEK of MYPU_3200. The assigned b and y ions are shown in blue and red, respectively. Glycosylation of S glycosites is absent in this spectrum as illustrated. The PEAKS peptide score (-10lgP) for this spectrum was 57. The charge state of the parental ion was $z = 3$.
