United Fund Opens Oct. 8
Hospital Goal is $12,250

Jewish Hospital's annual employee campaign for the local United Fund began a little later this year, October 8, but will carry with it the same vim and vitality of past campaigns.

William Chiles, campaign director, stated that this year's quota will be $12,250. Employees will be asked to complete their pledges in a 15-day period ending October 23 and to return them to their departmental team captains.

In last year's campaign, 1,045 employees contributed $11,075 to the campaign. It was 111 per cent of the hospital's $11,000 quota. In 1962, a total of $12,293 was raised.

The 70 team captains appointed to help supervise the campaign will ensure that each employee is aware of the need to support the United Fund in its activities here and in the community at large.

Local watchbirds will again be watching the traditional United Fund thermometer located in the lobby. Its mercury rises as employee contributions close in on the hospital quota.

Assisting campaign director Chiles will be Miss Edna Peterson, director of nursing, who will be co-chairman, Miss Rays Richman of the Public Relations staff will be coordinator of the campaign for the second year.

Heading the physician's end of the campaign will be Dr. Hyman Sontag, director of the department of radiology. In 1963, 117 physicians (excluding full-time physicians who contributed to the hospital campaign) contributed in excess of $9,900.

Two $15,000 Gifts Establish Scholarships, Professorship

Two $15,000 gifts establishing a perpetual post-graduate nursing scholarship fund and a visiting professorship in surgery, have been presented to Jewish Hospital by Mr. and Mrs. Leon J. Leonson of St. Louis.

The Freida H. Leonson Nursing Scholarship, established by Mr. Leonson in honor of his wife, will enable one or two qualified graduating seniors of the hospital school of nursing to continue with post-graduate training in the nursing field. The first scholarships will be presented at the August 1965 school of nursing commencement.

Mr. Leonson said that his interest in the shortage of graduate nurses prompted his scholarship gift.

The second gift established is the J. G. Prohstein Visiting Professorship of Surgery at the hospital. It was made by the Leonsons out of “friendship and appreciation” for Dr. Jacob G. Probstein, a Jewish Hospital senior surgeon and a family friend and physician for 40 years.

The Prohstein professorship will bring a nationally distinguished surgeon to the hospital annually for lectures, rounds, and consultations. It is expected that the first visiting professor will be appointed in early 1965.

Members of the committee to choose the visiting professor are: Dr. Morton D. Papper, director of surgery at the hospital; David A. Geo, executive director, Dr. Prohstein and the Leonson's daughter, Naomi Wagner (Mrs. Ira L. Wagner), of St. Louis.

Dr. Moore Heads
W. U. Medical Center

Dr. Carl V. Moore, Professor of medicine at Washington University School of Medicine and physician-in-chief at Barnes Hospital, has been appointed president of the Washington University Medical School and Associated Hospitals.

The associated hospitals include Jewish, Barnes, St. Louis Children's, and Barnes details.
Hay Fever Sneezer's Sneezes

Are Seldom Caused by Hay

Are seldom caused by hay fever, sneezers sneeze "because they noticed their eyes watered and they sneezed during haying season. Actually, hay fever is caused by ragweed pollen. In May or June are usually due to grass pollens. Some people are more or less allergic to certain kinds of grass pollen."

"Are you not born with a specific allergy—but have the capacity to become allergic to something? You may become sensitive by repeatedly coming into contact with certain foreign substances. You can inherit a tendency for becoming allergic; many families with allergic problems, though they were each allergic to different substances."

"An allergy is a violent reaction by the body to a foreign substance. The tearing and sneezing caused by many pollens is simply an effort of the body to rid itself of every bit of pollen, although the substance may not be harmful. At least, other people are able to get along with it."

"You are not born with a specific allergy—but have the capacity to become allergic to something? You may become sensitive by repeatedly coming into contact with certain foreign substances. You can inherit a tendency for becoming allergic; many families with allergic problems, though they were each allergic to different substances."

"An allergy is a violent reaction by the body to a foreign substance. The tearing and sneezing caused by many pollens is simply an effort of the body to rid itself of every bit of pollen, although the substance may not be harmful. At least, other people are able to get along with it."

"But getting back to The Village," he said. "I use what you would call my golf course, as a way of recreation; a vocational recreation. It's a little study of mine, which I am trying to offer to others."

"I just missed getting an old print shop,—there are 25 buildings on the 700 acres of Missouri countryside, 9 miles south of Farmington."

"There is a ghost town in south Missouri," he said. "It's my dream to have it made into something that really wasn't, but now is."
Q: How to Learn to Paint?
A: ‘Jump In’ Artist Says

"Get a starter kit and jump in," advised Jerry Van Noy, child care worker at Jewish Hospital, when asked how to paint. He was working on a still life in his 3rd floor studio in Gaslight Square.

It looked like an artist's studio — bare, with the exception of a saging divan, a stove with paint pots, a couple of tables with more paint supplies, an antique Flemish wall screen and an old desk converted into a carpenter's table. Fancy black grills covered half of the tall windows. The walls were paneled with red and gold patterned velvet paper in gold molding, put up, he said, on the whim of the former tenant for a formal party, "tails and all." On the panels hung his pictures.

Do you need an inspiration or do you just paint?

"That depends," he said, "Sometimes I'm inspired; other times, I just start to paint and see what will turn up. But I would say, the only way to paint is to start painting and see what will turn up. But I'm inspired; other times, I just start to paint and see what will turn up."

"That depends on how it moves; how easily I am able to resolve the problems it creates. But usually, from one to six weeks."

"I usually paint in the mornings and on weekends in my studio here. There are still a few real artists left in the Gaslight area. We had a sidewalk art show a few weeks ago."

"I also exhibited at the Missouri Show. That's held every year at the City Art Museum. Last year, 1,600 Missouri painters applied and only 500 were accepted. I won honorable mention in oils at the Jewish Hospital Art Show."

"Did you always want to be a painter?"

"No. I was a psychology major in college and in my senior year I decided I wanted a break from psychology. I took an art course — it was at the university of Padget Sound — and I really became inspired. My instructor was one of the best artists on the west coast, Berkley Chappell."

"Now I want to teach fine arts on a university level."

They were led by Robin Kopolow, Nancy Rimbach and Lynn Marshak.

KOPOLOW, NANCY RIMBACH AND LYNN MARSHAK.

Teenagers Honored For Hospital Service

More than 150 boys and girls of high school and college age who served as Candy-Stripers in some 40 areas of Jewish Hospital were honored at a luncheon in Steinberg Auditorium early this month.

Seven girls were honored for several consecutive years of service to the hospital. They were led by Robin Kopolow who has served 379 hours since December 1961. There have worked since 1962: Lynne Marshak, 575 hours, Marsha Well, 588 hours and Nancy Rimbach, 438 hours. Anne Hilles has served 441 hours since June 1963.

Honorable mention goes to Judy Wilkins, 310 hours, Cindy Baird, 254 hours, Marsha Well, 287 hours, Marilyn Heligman, 238 hours and Jan Stein, 229 hours, for their service to the hospital since September 1963.

The Candy-Striper accumulating the most hours during the 1964 summer was Bonnie Kohl who accumulated 274 hours from June 11 to August 23.

Some of these Candy-Strippers have stayed on and new members have enrolled, so that many areas of the hospital are covered by Candy-Striper's volunteer services on the weekends.

Four of the Seven Record-holding Candy-Stripers are. (Left to Right) Marshak Weil, Robin Kopelow, Nancy Rimbach and Lynn Marshak.

Editor, 216
Jewish Hospital of St. Louis
St. Louis, Missouri 63110

Dear Sir:

It was indeed inspiring to read the first page of the last issue of 216 (Vol. 13 — No. 1 JAN-MAY, 1964) describing the latest magnanimous gifts to the Jewish Hospital made by Mr. Charles H. Yalem and Mrs. Carlyln H. Wohl, widow of the late philanthropist David P. Wohl.

I realize that these articles only mentioned some of the very worthy gifts of the Yalem's and Wohl's, and I feel sure that perhaps just as many worthy causes they supported were not mentioned because of space or other reasons.

The next to the last paragraph in the article describing Mr. Yalem's gifts begins, "Mr. Yalem's major gifts in recent years include...". Perhaps because of personal interest, enthusiasm, or both, I feel compelled to call attention to an omission in the list of "major gifts".

Although compared to a monetary sense with the gifts described after the above quotation, this gift was not a "major one". It was, however, in my opinion and in the opinion of others at the Washington University School of Medicine major in its purpose and accomplishments. I refer to Mr. Yalem's unassuming, quiet, relatively unpublicized, but thoughtful and generous gift in 1961, which established the James H. Yalem Prize in Dermatology at the Washington University School of Medicine. This is a monetary prize similar to a number of other prizes in different subjects awarded to the medical students. It is awarded by a faculty committee annually to a member of the senior class for outstanding work in dermatology.

We have considered this a "major" contribution, since to our knowledge it is the first medical student award in Dermatology permanently established in a medical school in this country. More important, it has served to generate interest, enthusiasm, clinical knowledge, and research in dermatology by the medical students.

Sincerely yours,

LAWRENCE K. HALEPEN, M.D.
Director, Division of Dermatology
Jewish Hospital of St. Louis

Auxiliary to Hear Dr. Joyce Brothers

Double-headliners for the Annual Fall Women's Auxiliary meeting at the Westwood Country Club, will be the Hospital volunteer's and Dr. Joyce Brothers, popular psychologist.

Dr. Brothers has become familiar to millions of Americans through her ABC television program, a monthly column in Good Housekeeping, a daily column in 300 newspapers and many guest appearances on panel television shows. Her down to earth answers to questions on marriage, sex and single life remove the cloths from delicate subjects.

The VIP's of the program, however, will be the hospital volunteers. They will be summoned by a court announcer and page to receive their honors. White bars to be worn on the uniform are given for every 100 hours of service. A gold disc is given for the first 500. For every 1000 hours of service after the first 500, the gold disc is re-engraved.

Records for service this year closed September 15.

Mrs. Earl Susman, auxiliary president said, "It is a privilege to honor our volunteers and present them with their well-deserved awards."

Program chairman is Mrs. Donald Quicksilver. Serving on her committee are Mrs. John Telford Hearst, Mrs. Allen Molasky and Mrs. Stanley Main.

Chapel Given Lamp

A 100-year old Shabbos Light was presented to the Jewish Hospital chapel by the A. W. Baum family in memory of Ruth Rube Katz and Alva B. Baum.

The lamp was brought from America by Mrs. Baum's grandfather, Samuel Katz, in 1853, from Russia, and in 1946, to America by Mr. Baum's father, Moses Katz, in 1946. It will burn perpetually in the hospital chapel — now by electricity instead of the original oil. The Shabbos lights were lit on Friday evening to burn through the Sabbath.

Director Hired For Fund Raising, Public Relations

Max Appel, 32, has been appointed director of resource and public information at Jewish Hospital and will begin his duties here in mid-November.

He is presently the assistant national campaign director for the National Jewish Hospital in Denver, Colorado, a position he has held since 1962.

At Jewish Hospital, Appel will be responsible for the fund raising and public relations activities of the hospital. Funds for research, educational and certain patient care programs are needed to augment funds received annually from the United Fund and Jewish Federation. The hospital hopes to establish permanent endowment funds for this purpose. In addition, Appel will conduct all phases of the hospital's patient relations program.

In 1960, Appel became director of NJH's west regional office in Seattle, Wash.

Appel was formerly employed by the United Jewish Appeal as a field representative and when in the U.S. Navy was a newspaper editor.

A Denver native, he holds a B.A. degree from the University of Colorado and did graduate work at Boston University's graduate school of public relations and communications.

He is married, the father of two young children.

Hospital Art Show Attracts Visitors

MR. AND MRS. DAVID A. OEE ADMIRE OIL PAINTINGS.

DRAWINGS ATTRACT MANY VISITORS AS MRS. FRANK P. WOLFF, ART SHOW CHAIRMAN, AND MRS. EARL SUSMAN, AUXILIARY PRESIDENT, ADMIRE THE SECOND PLACE OIL PAINTING, "PAMPERED CHILD" BY DAVID DURHAM.
Doctor Studying Rat Liver's Life

In a clear plastic box, filled with wires and tubes through which liquids flow, Dr. Albert R. Eisenstein and his staff are keeping rat livers alive. The liver is removed from the rat, kept supplied with the nutrients and oxygen it would need if transplanted to its new environment: the perfusion chamber.

The chamber, which artificially reproduces the atmosphere of the body, was developed by Dr. Joseph Williams of the Department of Pathology at Washington University. It was built by Robert Connon, technician working with Dr. Eisenstein, and took two months to assemble. The intricate network of tubes permits the liver to be perfused with vital nutrients and solutions necessary in the experiment.

Dr. Eisenstein is conducting research in the area of carbohydrate metabolism — how the body stores and uses sugars and starches — with specific emphasis on the effect of cortisone on this process.

The liver acts as a storehouse for carbohydrates which have been converted into a substance called glycogen. Glycogen is found in liver cells and it has been learned that the addition of cortisone increases the production of glycogen.

In the liver in the perfusion chamber (and small slices of liver kept alive in a Dubois metabolic incubator), continue to produce glycogen. When cortisone or a cortisone-like substance is added, the production of glycogen is increased.

The question that Dr. Eisenstein and other researchers ask is this: How does the hormone stimulate the formation of carbohydrates? The theory is that cortisone stimulates formation of certain enzymes — catalytic agents — which act in production of glycogen in the cells, thereby increasing carbohydrate production.

In order to test this theory, Dr. Eisenstein has employed agents which inhibit action of the enzyme inhibitor and cortisone were added to the liver, glycogen production was reduced. It was found that the enzyme inhibitor alone reduced the production of glycogen.

The work being conducted by Dr. Eisenstein and his group will improve our knowledge of the way in which the liver works, the effect of cortisone on the body and may have some bearing on the continuing research being conducted into the causes of diabetes.

Working with Dr. Eisenstein on this project are: Mrs. Bena Brummer, and Carolyn DeLaigle, Kenneth Schmidt, medical student at the University of Illinois; Mrs. Joella Utley and Miss Wendy Hudson, instructors in food and nutrition at Washington University.

Hospital Rabbi Has Office But No Temple or Synagogue

When light number 456 flashes on the hospital call board, it means that someone wants to talk to the chaplain — a chaplain who has an office but no temple or synagogue.

For, as chaplain for the Jewish Federation, Rabbi Lawrence Siegel, serves the Jewish Community as a whole, acting as a counselor to persons who are not affiliated with a congregation.

During a typical week Rabbi Siegel attends group therapy sessions at the State Hospital Youth Center where he is a co-therapist for a group of teen-age girls, visits the City Jail when needed, confers with other rabbis in the community, calls on all unaffiliated patients, and plays a recorded concert of Jewish music for patients on the chronic disease division of Jewish hospital; shows movies to children at the State School; attends grand rounds at State Hospital. The door of his study, at Jewish, Barnes, State, John C. Cochran Veterans or Scott AFB Hospitals, is always open to persons of all faiths who wish to consult him.

Every Saturday morning Rabbi Siegel conducts services for patients and their families in the chapel on the first floor of Jewish Hospital. On Jewish holidays he conducts special services or rituals for hospitalized patients.

Rabbi Siegel was ordained at the Hebrew Union College in Cincinnati. He has also had post graduate training in social work at the University of California at Berkeley. His first post was at the California Medical Facility which is a maximum security institution organized as a therapeutic community for the rehabilitation of patients convicted of felonies.

What is the role of a chaplain in a hospital? How does religion supplement the care given patients by the medical profession?

"As a non-medical person," Rabbi Siegel says, "I am in the position of offering the patient an opportunity to express the anxiety he might feel concerning his illness on a different level than that expressed to the physician. I am, in a way, the personification of the person's religious feeling, a symbolic representation of his personal belief. Patients feel free to tell me their doubts, their family problems. Illness places a particular stress on families and often results in discord between parents and children, between husband and wife. As chaplain in the hospital, I work with the patients and their families at the time when they most need advice or comfort."

Rabbi Siegel also performs an important function for people who become hospitalized away from home. A patient who is brought to the hospital from another city is - if he is Jewish - seen by Rabbi Siegel. "I act as liaison between the patient and his out-of-town family. I find that people are terribly impressed by the awareness of this community which has led them to provide this service."

But Rabbi Siegel doesn't consider his job unusual. He says he performs "the regular services of a rabbi, as long as they are tangential to the institution."

Without temple or synagogue his varied, unusual and constantly changing congregation still consists of people who look to him for spiritual guidance, leadership and personal interest.

83 Freshmen Enroll In Nursing School

Eighty-three new students are enrolled in the Jewish Hospital School of Nursing — with half the enrollment coming from St. Louis and St. Louis county. Twelve students are on scholarships and loans from the St. Louis Scholarship Foundation.

Also beginning their first fall term are three instructors: Mrs. Beverly Schuller and Mrs. W. Justice, instructors in medical-surgical nursing; and Mrs. Dorothy Hooper in food and nutrition.

Last month, 63 new nurses graduated from the school of nursing. Ceremonies were held at the United Hebrew Temple with the commencement address given by the Rev. M. Sterling Price of the Third Baptist Church in St. Louis.

Dental Project Gets Third-Year Renewal

A three-year grant renewal from the United States Public Health Service for a hospital-based demonstration program of comprehensive dental care for chronically ill, aged and handicapped persons has been announced by Dr. Calvin H. Weiss, Director of the Hospital's Division of Dentistry and Project Director announced. Various members of the hospital's dental staff have been participating on this project for the past two years.

The goal of the project is to demonstrate to dentists, physicians, hospital administrators, community health planners, and students the role of dentists in the hospital-based health team, with emphasis on providing dental care in a hospital setting for long-term patients whose primary problems are medical.

Special problems related to a dental care program such as transportation, operating room usage, and handling of appointments, will be studied. Social and medical factors affecting patients' ability to receive dental care will also be studied.

A series of local and regional seminars have been held to familiarize professional groups with administrative and dental problems involved in treating long-term and handicapped patients.

"The project at Jewish Hospital is unique as a hospital-based program emphasizing the care of people with chronic and rehabilitation problems," said Dr. William J. Purdham, chief, disease control branch, division of dental public health and research.

Dr. "Jewish Hospital was selected for this demonstration project for a number of reasons — the unique nature of the hospital facilities, well-developed research programs, dental personnel, and source of suitable patients and strategic geographic location."

Muscle Tester Developed Here

A research fund has been established in the name of Bernard Lieberman, by Mrs. Harry Lieberman, Abe Lieberman, and friends, for original research on Parkinson's disease.

Dr. Franz U. Steinberg, director of the project, said he was extremely pleased with the results of Parkinson's disabling features of Parkinson's disease.
Don’t Ban Cigarettes Doctor Says:  
Prohibition Would Bring Bootleg Cigarettes

“If we banned smoking,” said Dr. Alfred Goldman, consultant in chest diseases at Jewish Hospital, “it would be like a return to prohibition, when people often drank poor whiskey. They would smoke bootleg cigarettes.”

Taking a relaxed puff on his pipe, he added, “now take a pipe. It is much safer than cigarettes. I light it with considerable gusto, take a few puffs, then it goes out. The next thing I’ll do is to clean it. You can’t inhale pipe smoke much, but the cigarette smoker gets it all in here,” he said, pointing to his chest.

“The final proof of the lung cancer smoking problem would be in the experimental production of lung cancer in laboratory animals.

“Education of the public starting with the school child is the most logical answer to the smoking problem at this time. I have three sons, none of whom smoke. They read the literature and have learned for themselves. The American College of Chest Physicians has taken a definite stand against smoking as being hazardous both to the lungs and heart.”

Dr. Goldman was in a good position to speak for the College. Now serving a one-year term as president, he has been on the Board of Regents for 12 years, working up to vice-president, then last year, president-elect.

He took a letter out of his pocket, “I’ll give an address at the inaugural ceremony of the International Congress on Diseases of the Chest to be held October 11th in Mexico City. President Matosas, who will still be in office then, will preside over this meeting.”

He added that at the international meetings, held every two years, they always meet with the heads of state, as well as, the American ambassador. Last year, for instance, he met the late Prime Minister of India, Nehru, at the meeting in New Delhi.

“These meetings,” he said, “promote much international good will. We attract distinguished doctors from all over the world to speak; about 3,200 doctors attend to learn; nobody doubts our motives as we are a non-profit medical organization. If our political heads would sit around a conference table as we do, in the interest of peace it would be a better world to live in.

“One of our projects is to set up post-graduate courses and clinics in backward countries. These courses are staffed by volunteers from the U.S.”

“You see, the purpose of the College is primarily to advance education, research and practice in the field of chest diseases for doctors throughout the world.”

Thus, much of Dr. Goldman’s private research has been in chest diseases. One study that he pioneered in and published in 1920 and 1922, will be presented by him at the meeting in Mexico: The Hyperventilation Syndrome—overbreathing.

“This forced respiration is very common,” Dr. Goldman said. “You see it daily in any large clinic, or in any situation where people are nervous, tense or upset. They will involuntarily overbreathe. This changes the chemical balance of their blood to such an extent that their hands get numb and tingly, they get headaches, feel dizzy, and they may faint, get tetany and even convulsions.”

Dr. Goldman became interested in hyperventilation while a medical student, working on the effects of chilling on the membranes of the nose and throat. The chilling caused the subjects to overbreathe.

“You probably have not heard about these experiments. We took off all our clothes and sat in a refrigerator with cold air blowing on our backs. Then we did certain tests that showed that cooling causes blood vessels in the nose and throat to constrict and reduce the blood supply, and we postulated that this caused bacteria to thrive and incite infections.

“And I’ve had frequent colds ever since.”

Patients Vote

“One of course voted,” a former patient at Jewish Hospital told a friend, “I requested an absentee ballot through the hospital.”

This could have been one of a dozen patients at Jewish Hospital speaking, for providing absentee ballots has been a service at Jewish Hospital for many years.

When the patient received his ballot from the election board, he filled it out before one of the hospital’s two notary publics.

The completed ballots were mailed by the patient at 4:30 p.m. Tuesday, August 4, to meet the midnight deadline.

Dr. Martin Roseau, M.D., teaching staff of Jewish Hospital, gave a speech on “The Diagnosis and Treatment of Thyroid Disease with Radioisotopes,” recently to the Puerto Rican Medical Society, Puerto Rico.

Dr. Carl J. Heffets presented a paper on “One-Layer Versus Two-Layer Interstitial Anesthesia” at the 16th Biennial International Congress of the International College of Surgeons, in Vienna, Austria. The paper also appeared in the proceedings of the 16th Biennial International Congress of I.C.S. He has also published an editorial “Yet Unleash Unhacked Herias Alone!” in the February issue of The Journal of Pediatrics.

Dr. B. Y. Glassberg, associate in internal medicine, gave a speech on “Psychological Sexual Behavior—It’s effect on Marital Adjustment—One American’s Point of View,” by invitation to the International Commission on Marriage and Family Guidance, in Munich, Germany. He also attended the International Union of Family Organizations in Munich and the International Congress on Social Psychiatry—section on marriage counseling and family problems in London.

Dr. Sidney Goldenberg, wrote a chapter on “Long Term Problems: Atherosclerosis,” published in the “Diabetes Mellitus,” which was released this June by the American Diabetes Assn.

Dr. Martin E. Levin, instructor, department of medicine at Jewish Hospital, gave a speech on “Genetic Diseases in Medicine, and Management of Abnormal Thyroid Diseases,” at the recent at the Texas Medical Society and Illinois State Medical Society, Pekin, Ill.

Suggestion Winners Announced

Four Jewish hospital employees were awarded $5 cash prizes by the suggestion committee of the hospital for ideas added to the safety and comfort of the hospital. The winners were: From left: Amelia Millisuster, housekeeping, who suggested placing non-slip matting in the hospital; Jerome Stoll, housekeeping, who suggested making a medical drug information bulletin board; Marshall Katzman, M.D., mixed intern, who suggested placing a shelf and writing paper in the doctors message center; Susie Schwartz, mixed intern, who recommended a sign on one south to direct visitors to the information desk and cashiers office.

Dr. Gustav Schmidt, D.D.S., has been elected to fellowship in the American Academy of Dental Medicine.

Dr. Lawrence Abbe, Director of the department of dermatology at Jewish Hospital, has been appointed to the dermatology committee of the American Academy of Dermatologists, by Dr. Clinton Lane, dermatologist-in-chief of the section of Jewish Hospital, president of the American Academy of Dermatologists.

Dr. Seymour Reihlman, associate professor of medicine, University of Rochester School of Medicine and Dentistry, was a visiting professor of medicine, Dr. Reichlman, chief of endocrinology at Rochester, received his medical degree from Washington University and his Ph.D. in physiology at the University of Minnesota.

Dr. Jerome I. Simon, past president of the St. Louis University Medical Alumni Assn.; was awarded a certificate of appreciation by the association for his efforts in behalf of its purposes.

Housestaff Leaves New Addresses

We bid farewell to this year’s housestaff, wishing them well in their new posts:

Errol E. Benson, M.B.B.S., resident in anesthesiology, will assume a position at the University of Colorado, Denver.

Joseph Shaford, M.D., incoming second-year resident in surgery, will be a resident in surgery, St. Luke’s Hospital, St. Louis.

Anna Hartnett, M.D., second-year resident in psychiatry, will be a resident in psychiatry at Washington University, St. Louis.

David C. Ruhu, D.D.S., dental intern, will be a dental intern at the University of Missouri Medical Center, in New York.

Vijay Gokhale, M.D., second-year resident assistant in medicine, will be a fellow in cardiology and medicine at Firmin Desloge Hospital, St. Louis.

William Jooffe, M.D., mixed intern, will be a fellow in ophthalmology at McMillan Hospital, St. Louis.

Daniel Kamefield, M.D., first-year resident in surgery, will be assistant resident in orthopedic surgery at Western Reserve University Hospital, Cleveland, Ohio.

Marshall Katzman, M.D., first-year resident in medicine, will be one of two residents at one of the hospital’s two rotary publics.

The completed ballots were mailed by the hospital at 4:30 p.m. Tuesday, August 4, to meet the midnight deadline.

Richard Lernerstein, M.D., fourth-year resident in medicine, will begin a private practice at the Great Falls Clinic, Great Falls, Montana.

Michael Mandl, M.D., intern, will be a resident in obstetrics at the Presbyterian Hospital, Denver, Colo.

Joy I. Rosen, M.D., general rotating intern, will serve as resident in radiology at the University Hospital of Pennsylvania, Philadelphia.

Fernando Saladin, M.D., general rotating intern, will be resident in surgery at St. John’s Mercy Hospital, St. Louis.

Robert Senier, M.D., second-year resident in medicine, will be a research fellow in medicine at Columbia Presbyterian Hospital in New York.

Suzie Schwartz, M.D., mixed intern, will go to the University of Missouri Medical Center, Columbia.

David Spelting, M.D., fourth-year resident in surgery, will begin private practice in Brentwood, Mo.

Paul Steibichker, M.D., second-year resident in surgery, will be in surgery at the University of Colorado Medical Center, Denver.

Gustav Schonfeld, M.D., third-year resident in medicine, will be a fellow in ophthalmology at St. Louis University.

Constance Tiglan, M.D., research fellow in endocrinology, will be a first-year resident in medicine at St. Mary’s Hospital, St. Louis.

Seymour Zemlyn, M.D., third-year resident in medicine, will begin private practice at Sunrise Hospital, Las Vegas, Nev.
2 Rehab Grants Receive Renewal

Grants totaling $75,489 for the Department of Rehabilitation at Jewish Hospital have been renewed by the U.S. Public Health Service.

Renewed for a third year is a $45,656 grant for the Training Center for Coordinated Home Care and Other Out-of-Hospital Health Services. Now two years old, the center trains and orients members of the hospital profession in the principles and techniques of care for the long-term ill and physically disabled. Emphasis is given to methods of home care under an organized home-care program or in homes for the aged or nursing homes.

Programs for the next 12 months include training courses on rehabilitation techniques for nursing home personnel, seminars for social workers on long-term illness in November, program on the role of the physical therapist in home care and nursing homes in December, an institute on public health and rehabilitation nursing in February and a seminar on the problems and care of long-term patients for community leaders and hospital administrators in March.

A $29,833 grant for a research and demonstration project on the Rehabilitation of Congenital Heart Failure Patients has been renewed for a second year.

Purpose of the study is to shorten the disability of heart disease patients by guiding them to safe levels of physical activity by determining their effort tolerance and preparing them for their regular occupations when they leave the hospital.

Both projects are under the direction of Dr. C. U. Steinberg, director of Jewish Hospital's department of rehabilitation.

Coordinator Joins Home Care Unit

Mrs. Sandra Howell has been appointed coordinator and research associate for the Home Care Training Center for Coordinated Home Care and Other Out-of-Hospital Health Services. Her responsibilities will include reports, minutes, the Home Care Newsletter, and seminar planning.

Mrs. Howell received a B.A. in philosophy and biological science; a master's degree in public health from the University of California, Berkeley. She is leaving a position of supervisor of Medical Records at St. John's Hospital, Springfield, Mo. Previously she was a research assistant at the Kaiser Foundation Health Plan, Los Angeles, Calif.

She replaces Gene Hanson, who resigned.

Scholarship Given In Fuller's Honor

A $10,000 scholarship fund has been established in memory of the late Leo C. Fuller, by his daughters, Mrs. Morton Burman and Mrs. Ross Resinkoff, for graduate study in nursing.

Mr. Fuller succeeded his father as chairman of the board of Stix, Baer and Fuller, and was active in many St. Louis organizations: St. Louis Council on World Affairs, St. Louis Symphony Society, The Boy's Town of St. Louis and as consultant at the Jewish Community Council of St. Louis.

The $550 scholarship was awarded the first time at nursing graduation to Miss Sylvia Miller. She will begin a part-time graduate program at the University of Illinois this fall.

Housekeepers Win Membership Trophy

The Jewish Hospital housekeepers have won a trophy — along with the housekeepers of 32 other institutions in St. Louis. The Anna Langdon trophy was presented to the St. Louis chapter of the National Executive Housekeepers' Association for the highest percentage of certified membership in the country.

This means that 78.6 per cent of the member housekeepers in the 3-year old St. Louis chapter have completed a minimum of 160 hours in the educational program.

"Education is one of the purposes of the organization," said Mrs. Beulah L. Sanders, executive housekeeper at Jewish Hospital and founder, as well as past president, of the St. Louis chapter.

"By 1971, anyone desiring to be an executive housekeeper, in charge of housekeeping in an institution, will need a college degree and one year of internship. Four universities now offer housekeeping degrees."

"Our aim," she said, "is to upgrade housekeeping into a professional field."

That's why Mrs. Sanders became interested in the organization. "St. Louis was the only city in this area that didn't have a chapter of the NEHA."

At a seminar for housekeepers in 1960 at Catholic Hospital Assn. in St. Louis, Mrs. Sanders talked with the national president of the NEHA. When she returned to St. Louis she invited several housekeepers to a "housekeepers workshop" — a roundtable discussion of mutual problems.

In 1961 the group received a charter. Now, Jewish Hospital offers both short courses and extension courses in executive housekeeping. This fall a 10-week, 30 hour credit short course will be held in Steinberg auditorium. Topics to be covered are: psychology, economics, supervision techniques, departmental organization, communication, interpersonal relations, budgeting, interior design, work standards, safety, disaster planning, isolation cleaning and techniques.
