An Advance in the War of the Knee

Operative arthroscopy, a new microsurgical technique, is in many cases making conventional knee surgery obsolete.

Managing Menopause

Both men and women undergo physical and psychological changes during middle age, but these years need not be discouraging. Louis V. Avioli, M.D., tells auxiliary women what to expect, and what rewards can accompany the middle years.

An Alternative to Starvation

216: A Process of Evolution

Once a modest eight-page newsletter, Jewish Hospital’s magazine has come a long way. This issue marks another transition: from quarterly to bimonthly publication.

The Gallery: Medical Staff Presidents

Dec. 4 marked the dedication of the hospital’s photo gallery of past medical staff presidents.

The Gallery: Chairman of the Board

This gallery has hung in the President’s Room since 1963, and now is a fitting time to remember these dedicated men, too.

Contributions to Jewish Hospital Funds

The Year of the Book

It could be a record. During 1980, a period of publishing house belt-tightening, at least four Jewish Hospital medical staff members had works published. A look at the books and the men behind them.

The Tribute Fund
Arthroscopic surgery usually begins with a general inspection through the telescope. The cable connects a powerful fiber-optic light source, which is beamed into the knee, giving it a characteristic red glow when the overhead lights are off. Later, surgeons insert tiny instruments into the side of the knee, checking location and progress through the telescope. A saline solution exits through the lower tube.
Case 1: Janet Macklin, 15, high school student. Injured knee during softball game. Able to walk hospital hallways eight hours after surgery. Discharged following morning.

Case 2: Ron Willis, 41, dockworker. Damaged knee cartilage on the job. Went home day of surgery. Returned to work in two weeks.

Although varying sharply in age and occupation, these patients, just three of the thousands of Americans who undergo knee surgery every year, share a common experience. All have benefited from the newest, most significant development in knee surgery in decades—arthroscopy, a technique that permits surgeons to diagnose and treat knee disorders with a small viewing scope and avoid the disadvantages of conventional surgery. Sometimes called microsurgery because of its tiny instruments, arthroscopic surgery is in many cases making standard knee surgery obsolete. It requires only a few small incisions—punctures, really—so it is far less traumatic, offers markedly shorter recovery periods and makes rehabilitation easier. In short, patients are getting back on their feet and out of the hospital sooner.

Knees: The Fragile Joint

Ask any orthopedic surgeon. Ask any runner or racing bicyclist. Ask Joe Namath, on the cutting end of at least four knee operations while quarterbacking the New York Jets—reduced in his last season to android status, adorned with yards of tape and massive leg braces.

Knee joints, considered by many to be the body's most flawed, have not changed appreciably in millions of years. They are just not designed to handle today's demands. Even innocuous acts like standing or climbing stairs can exert a force of more than five times the body's weight on them, and theoretically place them in peril.

The most common injuries affect the cartilage and ligaments (see illustration). A cartilage, or meniscus, is a soft pad made of smooth, sponge-like material; it exists in the body wherever unusual stress and violent movements occur, and the knees get their share of both. Cartilage also aids the knees' stability. When strained, it can break down or tear, and must then be partially or wholly removed.
“After arthroscopic surgery,” Dr. Morris says, “You come on the floor to discharge a patient in the morning, and it’s not unusual to have the patient meet me in the hallway, without crutches, and ask me when he can go home.”

A saline spray signals a change of telescopes. Different telescopes provide varying angles of view.

While operating room nurses make final preparations, Alan Morris, M.D., and other surgeons often make last-minute checks by direct knee manipulations, listening and feeling for abnormalities.

Nurse Nancy Clarke must keep track of every tiny, oddly shaped instrument and know them by name.
Debbie Beckman, R.N., changes the saline solution. Twelve one-gallon containers are easily exhausted during an operation.

Arthroscopy

Ligaments are the sinewy, flexible bands that hold the leg bones together and prevent them from slipping. They often tear or snap under stress, commonly from sports, football and basketball in particular.

For cartilage and ligament problems, the usual remedy in the past was the open arthrotomy. A huge portion of skin and muscle was exposed through a three- to six-inch incision. It left a gruesome scar and often took 50 or 60 stitches to close. One could seldom walk in fewer than two weeks; getting back to the job or sports was a matter of months, and there was no guarantee that your knee problems were over. Diagnosis during arthrotopies can be deceptive. Some injuries are easy to miss.

Innovations and the Japanese

The Japanese brought better surgery through technology. Physicians there had experimented with cystoscopes, the forerunner of arthroscopy’s telescope (view-piece) since 1918, when the first knee joint arthroscopy was performed at the University of Tokyo. The first truly modern arthroscope was designed by Masaki Watanabe in 1959. Six and one-half millimeters in diameter, with a special lens and light system, it could make sharp photographs through a still camera.

Like many medical innovations, arthroscopy (which means, literally, “looking inside the joint”) caught on slowly with American and other surgeons. It has only been within the last decade, and the last two or three years in particular, that arthroscopy, both diagnostic and operative, has caught on here. Jewish Hospital was one of the first in St. Louis to begin operative arthroscopy. Five Jewish Hospital orthopedic surgeons are performing it, and most of them have done so for less than a year, although all began diagnosing with the technique about 1974. The five: Alan Morris, M.D.; Charles Mannis, M.D.; Jordan H. Ginsberg, M.D.; Marvin R. Mishkin, M.D., and Robert C. Lander, M.D.

Dr. Morris explains arthroscopy’s slow coming of age: “A lot of physicians just didn’t think it had any merit. They thought the arthroscope was interesting, that you could take some nice pictures through it and see something, but they thought it didn’t really add to the overall patient care. They were wrong.”

Where they erred most was in underrating the arthroscope’s clear-cut diagnostic superiority. Previously, physicians relied on standard X-ray images, arthrograms or manipulation of the knee to diagnose injuries. With the advent of the arthroscope, they could actually see inside the knee and pinpoint the problem immediately and accurately. In fact, in the hands of an experienced surgeon, diagnostic accuracy often approaches 95 percent.

“There have been times when we originally believed a patient had one problem, say a torn medial meniscus,” says Dr. Morris, “and we would arthroscopically examine the knee before surgery and either find that there was not a torn meniscus as we suspected, or there was a torn meniscus plus something else. There was also a significant number of other pathologic problems found within the knee that you could see with the arthroscope that you didn’t even suspect and you might even have missed had you gone ahead and opened the knee for medial meniscectomy.”

Diagnostic arthroscopy has also reduced unnecessary surgeries. Patients who once routinely went under the knife after complaining of inexplicable knee pain—often to no avail—can be arthroscopically examined, often preventing a needless operation. If a surgically correctible problem is found, an arthroscopic operation often can be performed at the time of diagnosis.

Shortened Hospital Stays

Beyond more precise diagnoses, arthroscopy (when warranted) offers several other compelling advantages to arthrotopies, perhaps the most important being a drastically reduced hospital stay. Arthrotopy patients claim an average of 6.2 hospital days; the same patient operated on arthroscopically for the same injury leaves after 1.3 days—an obvious saving for the patient and better bed utilization for the hospital.

“After arthroscopic surgery,” Dr. Morris says, “you come on the floor to discharge a patient in the morning, and it’s not unusual to have the patient meet me in the hallway, without crutches, and ask me when he can go home. On the other
hand, with the standard open arthrotomy, the patient is still in bed, still groggy from his intramuscular demerol and morphine.

The arthroscopically operated patient returns to work sooner, too. A traveling salesman was once on the road again the day he left the hospital, three days after his surgery. Most patients, though, need about one week. Those who do heavy, physical work often go back within three weeks of surgery.

An open arthrotomy, on the other hand, would sideline a construction worker for at least six weeks, probably closer to eight or 12. Desk workers might return in a week, on crutches.

Patients with sports injuries can return much sooner, too. Dr. Mannis, often referred to as Jewish Hospital’s sports doctor, cites the case of Keith Krepfle, tight end for the Philadelphia Eagles, who suffered a torn cartilage. “They’re talking about having him back in two or three weeks. It’s not that unusual.” One of Mannis’ sports-related cases was a 15-year-old Webster Groves cheerleader. She underwent a partial meniscectomy (removal of damaged cartilage) and was cheerleading again in two weeks. “That’s the norm rather than the exception,” Dr. Mannis says. “Most patients in arthroscopic surgery feel that they’re ready to do something within a couple of weeks.”

Some tend to forget they have had an operation and want to go back too soon and too hard, mostly because they have so little pain. That is the deceptive part about the surgery. All you have to show for it are a few nicks. Still, cautions Dr. Morris, “they have to realize that they had a major operation inside their knee, and sometimes that’s hard to get through to people.”

Arthroscopy patients also recover their range of motion sooner and lose little muscle strength, if any, so they seldom need
Jewish Hospital surgeons can photograph arthroscopic knee surgeries directly through the telescope. Dr. Morris has compiled a notebook of slides he has taken single-handedly with a specially adapted 35mm camera, advancing the film with a motor drive. The telescope can even be connected to a color television monitor and record images for later playback.

This photograph taken directly through the viewpiece during surgery shows chondromalacia, a painful weakening and fraying of the knee cartilage.

much physical therapy. Arthrotomy patients are often immobilized, and need time to get their legs and knees back in shape.

The technique claims few complications. Infections are intrinsically low because of the continuous saline irrigation used both to remove microbes and improve the surgeon's visibility.

No Substitute for Arthrotomies

Arthroscopic surgery, however, is no panacea for knee ailments. Though the preferred medium for many problems—torn or frayed cartilage, other surface maladies and removal of loose bodies—it will never replace arthrotomies, still the only method for correcting several common and serious knee problems, especially those that require ligament reconstruction. Arthroscopy can never mend torn ligaments, and the arthroscope's small size makes it difficult to remove large pieces of cartilage. The surgery takes twice as long, too—at least an hour.

The biggest pitfall is learning the technique. Arthroscopy involves a new set of eye-hand coordinations that some surgeons will never learn, much less master. Surgeons begin by learning the diagnostic techniques and graduate slowly into the operative aspects. Those that become proficient often limit their practice solely to arthroscopy, often on an out-patient basis.

"The difficult part is that you first have to learn to know what you're looking at," says Dr. Mannis. "It takes a while to really know what you're seeing. You have to insert instruments at a certain angle, and if they're not quite at the right angle, you have to adjust them. It's not an easy technique. You have to sit there until you get it."

"Orthopedic surgeons are characteristically big, burly physicians with strong arms who are used to putting back broken bones and handling bulky equipment and instruments that look like a machine shop in a hardware store," says Dr. Morris. "But here we're using micro-instruments. It's a whole different ball game."

The long-term success story for arthroscopy is a waiting game. The technique is so new that only time and its statistics will show whether the procedure is effective over the long run, but most believe that the device, if properly used, can certainly cause no harm and for diagnosis is unparalleled. It is already being used in other joints—the elbow, ankle and shoulder.

"It's a technique that I think more and more people are realizing is something that is not a fad and is here to stay," says Dr. Mannis. "It's probably going to be the knee surgery procedure of the future."

Editor's Note: This is the first in a two-part series. A story on the division of orthopedic surgery will be included in the March/April 216.
A group of 60 to 70 auxiliary members listen intently as Louis V. Avioli, M.D., discusses the myths and realities of menopause.
Managing Menopause

It takes a lot of courage to be the only man in an entire room of 60 to 70 middle-aged women and deliver a talk on male and female menopause. Louis Avioli, M.D., director of endocrinology, not only carried off the presentation without a hitch, but he had the audience laughing, murmuring and actively participating in the seminar for more than two hours.

Speaking in the home of Phyllis Langsdorf (Mrs. Kenneth) on Dec. 4, Dr. Avioli began by apologizing for the title of the auxiliary seminar, "Middle-Age Madness," saying he would prefer to think of his topic as "The Excitement of Middle Age." Or, he said, another title could be, "What Do I Do With My Husband/Wife as He/She is Aging?"

Dr. Avioli said America is "preoccupied" with menopause, middle age and the sexual problems often associated with both. This fascination stems, in part, from the fact that our country is an aging population. The guest speaker cited statistics that demonstrate by the year 2000, the average life expectancy of a person will be 74 years, compared to age 47 in 1900; and the 65 and older segment of the population will have increased approximately 39 percent, numbering nearly 32 million people.

For the purpose of his discussion, Dr. Avioli defined "middle age" as "beginning at age 30, and it doesn't end until you die. The average woman of 30 has the best of both worlds. She has experienced the breakthrough in feminism and has been subjected to a new era of sexual permissiveness."

"Climacteric" was defined as the years between the onset of the decrease in sexual hormone production to the end of hormone production, and "menopause" is the specific biologic event of the last menstrual period. The median age of the menopause in women is age 50, with a range from age 40 to 57 years. But Dr. Avioli predicts that by the year 2000, with the higher level of nutrition in industrialized countries, the onset of menopause will be deferred, with the average age range of 48 to 65 years old.

Aside from the effects of nutrition, though, Dr. Avioli said there is no correlation between the onset of menopause and the age of the first menstrual cycle, whether the woman is married or not, the type of periods experienced, nor whether or not the woman has ever been pregnant.

Understanding Menopause

To know one's mate, Dr. Avioli said, it is important to understand what is happening to him/her physically and emotionally during this menopausal phase.

Some of the symptoms experienced by menopausal women include: hot or cold flashes; spotting; higher incidence of heart attacks; more prone to bone fractures; changes in the vagina, including loss of lubricating ability or an actual physical shrinking, and such psychological disturbances as nervousness, depression, anxiety—all of which lead to a decrease in sexual desire. In addition, because our society believes a woman's role is biological, with her primary function as sexual, reproductive and child rearing, many women experience a loss of femininity and/or sensuality with the cessation of menses.

Men, too, experience many of the same symptoms during their middle age "change," including: a preoccupation with career, resulting in a decreased libido and potency; depression, fatigue and lack of zest; migraine headaches; arthritis; insomnia; muscle spasms; irritability and the loss of self-confidence; hot sweats or cold chills; melancholy; memory loss, and inability to concentrate. The climacteric man is more susceptible to feeling that by his age either he has it made or he doesn't have the energy to try harder; he is most likely married to a grandmother; he often
Dr. Avioli predicts that by the year 2000, with the higher level of nutrition in industrialized countries, the onset of menopause will be deferred, with the average age range of 48 to 65 years old.

Menopause

Animated, expressive and involved.

has either lost interest in sex completely or else he is too worried during and after intercourse to enjoy the lovemaking. Often he is also obsessed with his self-body image and has a driving desire to do everything he could do at age 30.

Another common cause for a decrease in sexual activity among the middle aged has to do with lifestyle: too often a couple will eat a large meal in the early evening and then go to bed within two to three hours of dining. Dr. Avioli said a full stomach is apt to hamper one’s sexual performance. Therefore, he advises individuals to change their pattern by having sex in the morning, or better yet, during the lunch hour—a suggestion that brought a large burst of laughter from the audience.

For all of these reasons, both physical and psychological, both real and imagined, men and women often experience sexual problems during their menopausal years. Unfortunately, too often these persons try to absolve their problems with alcohol or tranquillizers, which further exemplifies their situation by making it more difficult, if not impossible, to achieve successful, satisfying intercourse.

“Everyone Doesn’t Need a Sex Therapist”

In conclusion, Dr. Avioli advised: “If your partner is unhappy, look at him, determine what is wrong and try to change the situation. Everyone doesn’t need a sex therapist or a counselor; often all you need to do is drastically change your lifestyle.”

10
An Alternative to Starvation

“Before, these patients just died. Now they have an alternative.”

The patients were largely malnourished post-operatives; the alternative is Total Parenteral Nutrition (TPN), a life-saving Jewish Hospital procedure and topic of a discussion by exponent John Hirsch, M.D., at the Associates In Medicine’s Nov. 19 program.

In front of a responsive and diverse audience of 150 Associates members, guests and pharmacy students in the hospital’s Brown Room, Dr. Hirsch effectively blended slides and medical statistics into a surprising and somewhat startling picture of malnourished patients undergoing taxing surgeries, with death often the result. He showed clearly that malnourished patients not only have an increased death rate, especially after surgery, but that they also experience a higher infection rate and longer hospital stay than properly nourished patients.

“The literature is replete with cases,” Dr. Hirsch emphasized. “Patients who are well nourished fare better than those who are not.” In both post-operative and catabolic patients—burn and trauma victims, or those with cancer or inflammatory bowel diseases—the body demands additional calories to sustain itself, Dr. Hirsch said, and because these patients are often unable to eat or eat enough, starvation can result.

“We should do everything in our power to deal with this. Rather than starve a patient, nutritional support can be offered.”

The support Dr. Hirsch advocates is TPN, where a carefully formulated and controlled mixture of complete liquid nutrients is administered intravenously through
Malnourished patients not only have an increased death rate, especially after surgery, but they also experience a higher infection rate and longer hospital stays than properly nourished patients.

a surgically implanted catheter. (For a detailed look at TPN, see the June 1980 issue of 216.)

**Best Nutritional Support in St. Louis**

Although once plagued by patient infections and inconsistent nutrient solutions in the early and mid-70s, like all hospitals were, the Jewish Hospital TPN program’s complication rate is now well below the national average, Dr. Hirsch said, and the hospital has the best nutritional support program in St. Louis and one of the best in America.

Dr. Hirsch attributed the improved record primarily to a stringent hospital policy of patient screening and infection control, a policy implemented and practiced by the hospital’s Nutrition Support Team beginning in 1978.

An important example of the team’s effort, Dr. Hirsch said, “is the virtual elimination of sepsis, a serious and significant infection associated with catheter insertion.”

The team, initiated by Dr. Hirsch, not only supervises the hospital’s TPN program, but it also, through a detailed nutritional assessment program, takes an in-depth look at every patient suspected of having nutritional problems.

Dr. Hirsch said he believes nutritional factors probably play a more important role in many disease processes than previously suspected, and he criticized the lack of attention the medical world has applied to nutrition, admitting he never received nutritional training while a medical student during 1969-73.

**Nutritional Aspects of Cancer**

Dr. Hirsch expressed particular concern for the role nutrition plays with the cancer patient, one who more often dies from the effects of starvation than cancer. “It appears cancer treatment, be it chemotherapy or radiation therapy, is more effective and less traumatic with well-nourished patients. TPN can bring better functioning and longer life.” To point out the nutritional ravages of cancer and its treatment, Dr. Hirsch called to mind the late Sen. Hubert Humphrey, who in a succession of photographs in the national news magazines grew progressively pale and gaunt, as much a victim of starvation as his bladder cancer.

“Now,” Dr. Hirsch added, “the National Cancer Institute is spending the biggest part of its budget on studying the nutritional aspects of cancer.”

Later in the program Dr. Hirsch introduced Nutrition Support Team Members David Bradley, Pharm.D., and Patti Beetz, R.N., who explained their roles in the program. Dr. Hirsch also introduced Joann Shortman, of Kansas City, Mo., an ostomate and one of the hospital’s home TPN program patients. “I feel super, I feel so good,” she said, praising both Dr. Hirsch and the hospital. “They try to help the quality of your life; they want you to go home and feel good.”

“What we’ve tried to do here,” Dr. Hirsch concluded, “is to construct a model, to develop a nutritional support concept. In the long run, nutritional support is the way we’re going to help people stay out of the hospital for longer periods of time.”

Joann Shortman described her life as a home TPN patient.
Among the Associates' guests were several students from the nearby St. Louis College of Pharmacy.

Complimentary wine and cheese were served after the program.
December 1959—David A. Gee, original editor of 216 and associate director, serves Hospital Executive Director David Littauer, M.D., and his wife at the employee holiday party. A lot of changes have since taken place.
“216”:
A Process of Evolution

By Denise Pattiz Bogard

Predicting the 216, the Jewish Hospital Bulletin made an annual appearance from 1939 to 1941.

“The newest thing in modern journalism is 216, which, even in its infancy, faces the staggering task of binding together all the component parts of a modern, rapidly growing medical center which will soon be one of the greatest in the entire Middle West.”

216, Vol. 1, Number 1
June 1952

Life was much simpler at The Jewish Hospital of St. Louis in 1952. The entire business office was managed by five employees. No personnel department existed. The employee cafeteria was segregated into dining areas according to one's race and working position, and the hospital claimed a total of five typewriters.

The 216, too, was much more elementary then, consisting of eight pages, little photography and short, “fluffy” stories. Don't misunderstand—this account is not intended to be derogatory; the description comes straight from the mouth of the editor of Volume 1, Number 1, David A. Gee, hospital president.

“It's really kind of incredible how primitive those 216s were. They were really bad,” he laughs.

The hospital president laughs in retrospect, but in June 1952, the 24-year-old editor's intent was to “produce a paper that will not only interpret the hospital's operation, services, policies and its role in the community, but also will strive to knit together the employees and staff by giving them the opportunity to learn about each other.”

Quite an undertaking for a hospital administrative assistant with no journalistic training who accepted the position of editor because “no one else wanted it.”

A Pioneering Effort
The original monthly newsletters may seem modest compared to the 60-page, photo-filled magazine of today, but in the early 1950s their appearance marked a pioneering effort on the part of then-hospital executive director, David Littauer, M.D. Newsletters that attempted to communicate company news to employees and boards of directors were a relatively new phenomenon, with few organizations engaging in “public relations.”

With the aid of two volunteers, Gee produced the newsletter containing articles and news briefs about the Jewish Sanatorium, the Miriam Rehabilitation Hospital, the Jewish Medical Social Service Bureau and the Jewish Hospital Auxiliary, which were to be the mainstays of the Jewish Hospital and its future mission in the turbulent post World War II era. "The newest thing in modern journalism is 216,” which, even in its infancy, faces the staggering task of binding together all the component parts of a modern, rapidly growing medical center which will soon be one of the greatest in the entire Middle West.

216 will reach the employees of the entire hospital in printed form. Members of the Board of Directors and the Auxiliary, and friends of the hospital will also receive a copy of the newsletter in the mail.

The first editorial staff is composed of David A. Gee, editor, Martin L. McCrory, associate editor, Wayne Eriksen, associate editor, and Miss Mary Ann Covello, office manager. Published once a month, "216" will reflect the complexities faced by a Medical Center Serving the Middle West.

June 1952, Vol. 1, Number 1. David A. Gee is editor-in-chief of this eight-page newsletter.
The second year, and the 216 is evolving into a more polished newsletter with lengthier issues and better photo reproduction.

216 goes magazine. October 1970, under the editorship of Barbara Janes, the publication is dramatically upgraded into the magazine format that exists today.

During the late 1970s, the somewhat sporadic timetable is regularized into a quarterly issuance, which continued through 1980. Now, with this issue, the 216 goes bimonthly.
and photography, longer articles and an ever-growing list of tribute fund donors.

In the early 1960s, the hospital hired a professional public relations person, Robert Rubright, who, according to Gee, “really established the professional tone of the 216.”

The next major transformation occurred in October 1970 when the 216 was changed to the magazine format that exists today. This was accomplished under the direction of Barbara Janes, who, Gee says, “dramatically upgraded” all elements of the hospital’s public relations image. The magazine averaged from 30 to 40 pages in length then, containing in-depth medical stories, expanded photo coverage, news about the Associates and auxiliary, and about 15 pages of tribute fund listings. The mailing list was increased to include involved community members and the hospital’s medical staff.

The publication timetable was somewhat sporadic for several years until the late 1970s, when the magazine became a quarterly.

216 Goes Bimonthly

Now, with the appearance of this issue, the 216 again is undergoing a change in issuance, this time from a quarterly to a bimonthly. The reason for the increase, says Gee: “We can expand coverage and provide more current information. I think with anything as complicated as a hospital and with the constant technological changes going on, the community needs to be kept aware. The 216 can help educate the public.”

What began modestly 29 years ago has since evolved into a communications and public relations device that serves both the hospital and its community. It is our hope that the 216 will continue to develop and improve so that in 30 years this editor, too, will smile at the 1981 copies and say, by comparison, they were “incredibly primitive then. They really were bad.”

A Tribute to the Tribute Fund

Tucked away on an inside page of the first 216 appeared a brief listing of donors who had contributed money to a “tribute fund.” As with the rest of the magazine, this listing has since evolved and expanded enormously, so that it now numbers anywhere from 15 to 30 pages in length, and it brings a significant revenue into the hospital.

The tribute fund began in 1952 under the chairmanship of Mrs. Henry Stern and Mrs. Clarence Eckert. It was initiated by the auxiliary in order to attract donations for medical supplies and research. This basic concept has never changed. Unspecified donations go into an overall account, which covers the costs of general medical needs and research. More than 180 named funds also constitute the tribute fund. These accounts usually are established to benefit a particular need, as specified by the donor. The named funds encompass nearly every area of the hospital, including surgery, psychiatry, otolaryngology, obstetrics, research into the blood, the liver, kidney and various diseases, foremost among them cancer.

Tributes can be made in the form of an honorific or memorial contribution by calling the tribute fund office at the hospital, 454-7242, or by sending checks payable to The Jewish Hospital Tribute Fund, c/o Mrs. Claude Abrams or Mrs. Hyman Goldstein, 216 South Kingshighway, P.O. Box 14109, St. Louis, Mo. 63178. Both the sender and the recipient receive an acknowledgement of the donation within a few days.

All contributions appear in the tribute fund listing of the 216—a listing which will be more frequent and timely with the magazine’s increased issuance.

Since initiated 29 years ago, the tribute fund has continued to expand, reflecting an ever-growing community involvement and commitment. As the list increases, so too do the chances for a healthier future. Thank you for your support.

The new tribute fund deadlines and the 216 issue in which your tribute will appear are as follows:

Any tribute received after a deadline will appear in the following issue.
The Gallery: Medical Staff Presidents

A new gallery of portraits hangs in the second floor of the Kingshighway Pavilion near the east/west nursing corridor. The subject: past presidents of the medical staff of The Jewish Hospital of St. Louis.

A reception marking the portrait display took place Thursday, Dec. 4. Administrators, employees, community members and some past presidents and their families were present to pay tribute to the 21 physicians who have served as president of the medical staff since 1902.

The event took place during the Hanukkah celebration; Rabbi Lawrence Siegel, hospital chaplain, opened with the lighting and blessing of the Hanukkah candles. David A. Gee, hospital president, welcomed everyone, thanked Lydia Motchen (Mrs. Carl), assistant to the president, for coordinating the gallery, and then introduced Richard G. Sisson, M.D., current medical staff president.

Dr. Sisson reviewed the many duties of the presidents who “have a tendency to stick our noses into every area of the hospital.”

Waving a hand at the gallery, Dr. Sisson commented on the male dominance—“Let’s hope that a woman will soon be president”—and said that additionally each president had this in common: “Each person on the wall has devoted his primary professional life to Jewish Hospital. Each man has contributed much to the hospital.”

A wine and cheese and latke reception followed.

David A. Gee, hospital president, welcomes everyone to the event, noting that in the crowd are many of the past presidents and/or their families. Among them, in the foreground, are the great-great-grandchildren of Herman Tuholske, M.D., first medical staff president.

Herman Tuholske, M.D.
President: 1902-1920

As first president of the medical staff of Jewish Hospital, Herman Tuholske, M.D., served for 18 years. He was born in 1848 at Meseritz, Prussia, emigrated to America and settled in St. Louis in 1865.

He graduated from the Missouri Medical College in 1869 and immediately after graduation served as physician to the city dispensary.

He was in charge of the quarantine hospital during the smallpox epidemic of 1872 and for several years was the examining physician to the police force and physician to the jail.

In 1873 the Missouri Medical College appointed him professor of anatomy, a position he held for 10 years. He was then selected as professor of surgery when the Missouri Medical College became the medical component of Washington University.

Next to his home at Jefferson and Locust streets, he established the St. Louis Surgical and Gynecologic Hospital, which remained in existence until he became chief of staff of the Jewish Hospital. He was not only the first president of the medical staff of Jewish Hospital, but he also served as head of the department of surgery at the same time—from 1902 to 1919.

Dr. Tuholske died May 2, 1947.
Hanau W. Loeb, M.D.
President: 1920-1927

As the second president of the hospital’s medical staff, Hanau Loeb, M.D., was an advocate of a relationship between a teaching institution and the hospital. Dr. Loeb was credited with developing Jewish Hospital along scientific lines.

He received his M.D. degree from Columbia University in New York in 1888. In 1890 he helped organize the Marion Sims Medical College and became its head of otolaryngology. Marion Sims Medical College merged with Beaumont Medical School in 1901; both were absorbed by St. Louis University in 1903.

In 1903, Dr. Loeb became president of the American Academy of Ophthalmology and Otolaryngology. In 1913 he was named dean of the St. Louis University Medical School.

He was one of the organizers of the American Board of Otolaryngology and was publisher-editor of the Annals of Otolaryngology, Rhinology and Laryngology.

He was chairman of the section of otolaryngology of the A.M.A. and president of the American Laryngology, Rhinology and Otological Society.

Dr. Loeb died July 1927.

Llewellyn Sale Sr., M.D.
President: 1927-1935
1943-1946

Llewellyn Sale, M.D., served two separate terms of office for a total of 11 years.

Dr. Sale was born in Baltimore, Md., and did his pre-medical education at the University of Chicago and the University of Bonn in Germany. He received his medical degree from Washington University and did post-graduate work at the University of Berlin and the University of Munich.

Dr. Sale interned at City Hospital and was instructor in medicine at St. Louis University and assistant professor in medicine at Washington University. He was on the staff of Barnes Hospital. The St. Louis Medical Society elected him president in 1947.

Dr. Sale’s son—also a well-known and highly respected physician in the community, Dr. Llewellyn Sale Jr.—is presently associate director of the hospital’s department of medicine.

Dr. Sale Sr. died July 6, 1965.

Albert E. Taussig, M.D.
President: 1935-1936

Fourth president of the medical staff, Albert Taussig, M.D., served a one-year term.

He received his A.B. degree at Harvard in 1891 and his M.D. degree at Washington University in 1894. After an internship at St. Louis City Hospital he studied abroad for several years.

He published more than 50 articles on physiology and medicine and was known for his wide range of knowledge.

He was clinical professor of medicine at Washington University Medical School and director of the department of internal medicine at the Jewish Hospital from 1926 to 1935. He also served as co-editor of the Interstate Medical Journal.

His passionate love of justice led him to be an active member of the American Civil Liberties Union, and he is remembered for his scrupulous fairness.

Dr. Taussig died Jan. 17, 1944.

Jerome E. Cook, M.D.
President: 1936-1939
1946-1949

Jerome Cook, M.D., was the second president of the medical staff of Jewish Hospital who served on two separate occasions. He served in this capacity for six years.

He was a native St. Louisan, graduated from Washington University Medical School in 1905 and interned at City Hospital; he did his post-graduate work at the University of Berlin in 1907.

Director of the department of medicine from 1947 to 1949, he played a leading role in teaching the intern staff and lecturing to student nurses.

He was assistant professor of medicine at Washington University, a member of the staff of Barnes Hospital, a fellow in the American College of Physicians and a diplomate of the American Board of Internal Medicine.

Dr. Cook’s widow, who resides just across the street from the hospital, is also the sister of Dr. Paul S. Lowenstein of our department of surgery.

Dr. Cook died Dec. 12, 1964.
Max W. Myer, M.D.
President: 1939-1943

Max Myer, M.D., the sixth president of the medical staff, was born in Salisbury, Mo., did his pre-medical work at the University of Missouri and graduated in 1899 from the Marion Sims Medical College (now St. Louis University).

He studied at Heidelberg University in Germany and on his return—at the age of 23—became professor of surgery at Missouri University.

During World War I he served as a major in the medical corps. In 1919 he was appointed to the faculty of the medical school of St. Louis University and subsequently was appointed professor of surgery—a post he held for many years.

His faithful service to the Jewish Hospital included associate surgeon rank on the ward service staff from 1920 to 1926, surgeon from 1926 to 1931, director of surgery from 1931 to 1946 and—finally—consultant in 1947.

Dr. Myer died May 16, 1948.

Arthur E. Strauss, M.D.
President: 1949-1953

Arthur Strauss, M.D., was born in St. Louis. He received his bachelor’s degree cum laude from Harvard College in 1912 and his doctor of medicine degree cum laude from Harvard Medical School in 1917.

He did his internship at Massachusetts General Hospital, was cardiology resident at St. Francis Hospital in Pittsburgh and then served in the United States Medical Corps as captain from 1917 to 1919.

He was a pioneer in establishing cardiology as a specialty in St. Louis, serving as director of the heart station at Jewish Hospital from 1919 to 1952. For many years he was chief of the heart clinic at the Washington University clinics. He was assistant professor of clinical medicine at the Washington University School of Medicine.

He was a diplomate of the American Board of Internal Medicine and a fellow of the American College of Physicians, and one of the early organizers of the American Heart Association.

Dr. Strauss died Oct. 9, 1974.

Paul S. Lowenstein, M.D.
President: 1953-1955

Paul Lowenstein, M.D., is also a native St. Louisan. He received his M.D. degree from St. Louis University School of Medicine, interned at Jewish Hospital and did his residency at Mount Sinai Hospital in New York City. When Dr. Lowenstein served his internship here from 1916 to 1918 he was one of only two interns.

Dr. Lowenstein served in the United States Army in France in 1918.

He was one of the founders of the American College of Angiology and served as its president. He served on the board of the International College of Angiology, was regional consultant for Medicare for the state of Missouri and director of the department of surgery’s emergency ward and clinics of Jewish Hospital.

He has published a wide range of papers, is certified by the American Board of Surgery and a fellow of the American College of Surgeons, and today holds the rank of emeritus in the department of surgery.

Dr. Lowenstein also is associate editor of Angiology and an editor-in-chief of Vascular Surgery.

Samuel D. Soule, M.D.
President: 1955-1957

Samuel Soule, M.D., has long been a familiar figure at the Jewish Hospital and has delivered a fair number of babies during his many years on the Jewish Hospital staff.

Dr. Soule was born in St. Louis, attended Washington University and did his internship and residency at St. Louis Maternity Hospital.

A well-published obstetrician and gynecologist, Dr. Soule served as co-director of the department of obstetrics and gynecology at the Jewish Hospital and today holds the rank of obstetrician-gynecologist in the department.

Dr. Soule served as commander in the U.S. Navy from 1943 to 1946. Some of his earlier roles included associate professor of clinical obstetrics and gynecology at Washington University School of Medicine, associate gynecologist to St. Louis Children’s Hospital as well as Washington University clinics, physician in charge of endocrine division of gynecology of Washington University clinics, and assistant obstetrician and gynecologist to St. Louis Maternity and Barnes Hospitals.
The Gallery: Medical Staff Presidents

I. Jerome Fiance, M.D.
President: 1957-1959

I. Jerome Fiance, M.D., was born in Brooklyn. He graduated from Washington University in 1931 and received his M.D. degree in 1935.

He interned at Jewish Hospital from 1937 to 1940 and did his residency at Koch Hospital and Harlem Hospital in New York in 1940. He has been in the private practice of internal medicine since 1941 with his specialty being chest and pulmonary disease.

Dr. Flance was a member of the board of directors of Jewish Medical Social Service Bureau before it merged with Jewish Hospital and also was a member of the board of the Jewish Federation.

He is on the staffs of Jewish Hospital, Barnes Hospital, Mount St. Rose Hospital and a consultant to St. Louis City Hospital and Robert Koch Hospital.

Between the years of 1953 to 1964—a period of more than 11 years—he did an exemplary job as director of the hospital's home care department and in the early 1950's—together with Dr. David Littauer—brought the then-new concept of home care into being at the Jewish Hospital. He also was a prime motivator in assisting other hospitals throughout the United States to develop their own home care programs.

David Rothman, M.D.
President: 1959-1961

David Rothman, M.D., is a native St. Louisan and attended Washington University. He interned at Jewish Hospital, St. Louis Maternity and Barnes Hospital and did his residency at Jewish.

Dr. Rothman was head of the department of gynecology and obstetrics of Jewish Hospital and is associate professor emeritus at Washington University School of Medicine. He holds the rank of obstetrician-gynecologist at the Jewish Hospital.

He has presented many papers, is a member of the American Medical Association, the St. Louis Medical Society, the American College of Ob & Gyn, the Central Association of Ob & Gyn, St. Louis Gynecological Society and the Academy of Psychosomatic Medicine.

He was a member of the United States Air Force in 1942. He has fulfilled several teaching appointments at Washington University School of Medicine since 1938.

M. Norman Orgel, M.D.
President: 1961-1965

M. Norman Orgel, M.D., was born in New York and educated at the College of the City of New York and Harvard University. He then came to St. Louis, where he received his M.D. degree from Washington University in 1934.

A fervent worker for the department of medicine and the Jewish Hospital alike, Dr. Orgel also served as both president and chairman of the board of the Social Health Association of Greater St. Louis. He holds the rank of physician in the division of internal medicine in the department of medicine and is assistant professor emeritus at Washington University School of Medicine.

He also served as vice president of the associates of the Jewish Hospital as well as the president of that organization from 1973 to 1975. Dr. Orgel is chairman of the advisory executive committee in the department of medicine and has served in this capacity for years.

Carl J. Heifetz, M.D.
President: 1965-1966

Carl Heifetz, M.D., received his M.D. degree from Washington University in 1929 and served his internship from 1929 to 1930. He was a surgical resident from 1930 to 1934 and a fellow in surgical pathology from 1934 to 1937.

He became surgeon-in-chief at Jewish Hospital from 1952 to 1954. He also was associated with Homer Phillips and Barnes Hospitals and rose to the rank of associate professor of clinical surgery at Washington University.

He was the author of many publications and received many honors from his colleagues. He was elected president of the St. Louis Surgical Society in 1971. In the same year the surgical house staff of the hospital presented him with an award for the excellence of his teaching.

He was immensely interested in chamber music, fine wine and travel.

In 1977 the department of surgery's Carl J. Heifetz Memorial Library was dedicated, and as Dr. Arthur E. Baue recalled: "Carl was a gifted teacher and a courteous and compassionate doctor."
Morris Abrams, M.D.
President: 1966-1968

Morris Abrams, M.D., was born in Chicago; he was schooled in Illinois, receiving his M.D. degree from the University of Illinois.
A specialist in urology, Dr. Abrams has been a member of the St. Louis Medical Society, the American Medical Association, a fellow of the American College of Surgeons and diplomate of the American Board of Urology.
He has a list of publications to his credit and currently holds the rank of urologist in the division of urology of the department of surgery, as well as associate professor in the division of urology at Washington University School of Medicine.
He is board certified by the American Board of Urology and has served as director of the hospital's division of urology. During the hospital's 1970 expansion program, it was Dr. Abrams who served as the chairman of the physicians' division, serving as the link between that group and the hospital.

Morris Alex, M.D.
President: 1968-1970

Morris Alex, M.D., served as president of the medical staff from 1968 to 1970.
He was born in St. Joseph, Mo., attended St. Joseph Junior College and then went on to Washington University School of Medicine and Missouri University School of Medicine, and subsequently interned at Jewish Hospital.
Dr. Alex is board certified by the American Board of Internal Medicine, served as president of the St. Louis Heart Association and is a fellow of the American College of Cardiology, American College of Chest Physicians and the American College of Physicians.
Some of his past accomplishments include an instructorship at Washington University School of Medicine, as well as his expertise in the field of home care at both Jewish Hospital and St. Louis City Hospital. He currently is attending physician in the division of internal medicine in the department of medicine and holds the rank of assistant professor at Washington University School of Medicine.
He has long been associated with the teaching services—at Jewish Hospital, Barnes Hospital, City Hospital and Washington University, and he belongs to a legion of societies.

Harry D. Rosenbaum, M.D.
President: 1970-1972

Born in St. Louis, Harry Rosenbaum, M.D., represents the only ophthalmologist who has served as president of the hospital's medical staff.
Dr. Rosenbaum received his pre-medical education at Washington University and received an M.D. degree in 1934. He interned at Jewish Hospital and did his residency at Washington University Hospitals and City Hospital.
He holds the rank of ophthalmologist in the department of ophthalmology at the Jewish Hospital and the rank of assistant professor at Washington University School of Medicine. He is board certified by the American Board of Ophthalmology and has published papers on his chosen specialty.
Esteemed in the hospital family as well as the community, we have taken a quote from Dr. Rosenbaum's speech to the board of directors in 1971—which probably sums up his philosophy—when he used a familiar passage from the book of Proverbs:
"Behold a good doctrine has been given unto you... forsake it not."

Leo A. Sachar, M.D.
President: 1972-1974

Leo Sachar, M.D., was born in St. Louis and attended Washington University School of Medicine, and he received his M.D. degree in 1940.
Dr. Sachar did both his internship and residency at Jewish Hospital. He was a major in the United States Army Medical Corps from 1944 to 1946. In 1966 he served the hospital as its acting surgeon-in-chief.
He has written numerous scientific publications, holds the rank of surgeon in the department of surgery and the rank of associate professor at Washington University School of Medicine.
He is a diplomate of the American Board of Surgery and holds membership in local, state and national surgical and medical societies.
Dr. Sachar played a leading role in the development of the surgical intensive care unit at the hospital, which formally opened on Nov. 1, 1967.
Jerome J. Gilden, M.D.
President: 1974-1976

Jerome Gilden, M.D., not only was born in St. Louis but was born at Jewish Hospital. He attended Washington University and did his internship and residency at the Jewish Hospital. He had a three-year fellowship at the University of Cincinnati.

Dr. Gilden is certified by the American Board of Orthopedic Surgery. He is director of the hospital’s division of orthopedic surgery and holds the rank of assistant professor at Washington University School of Medicine.

Since mending broken bones is one of the things that Dr. Gilden does best, it probably is no surprise that St. Louis Blues hockey players are some of his best customers.

Dr. Gilden plays an active role for the betterment of the Jewish population as chairman of the Jewish Community Centers Association’s Medical Advisory Committee.

Martin Bergmann, M.D.
President: 1976-1978

Martin Bergmann, M.D., served as president of the medical staff from 1976 to 1978.

He was born in Berlin, Germany. He received his education in St. Louis at Washington University and served in the United States Air Force Reserve. He served rotating internships at Jewish Hospital and Barnes Hospital.

A number of publications are credited to him as well as professional appointments, which include the directorship of the department of thoracic and cardiac surgery of Jewish Hospital from 1959 to 1969 and the post of clinical assistant professor of surgery in thoracic surgery at Washington University from 1970 to 1972.

He is certified by the American Board of Surgery as well as the board of thoracic surgery. He is senior attending thoracic and cardiac surgeon in the department of surgery and holds the rank of associate professor at Washington University School of Medicine.

He has long been a valuable asset to Jewish Hospital—sometimes in the role of consultant—sometimes as representative to the infections committee, and sometimes in his role as senior attending thoracic and cardiac surgeon.

Arthur H. Gale, M.D.
President: 1978-1980

Arthur Gale, M.D., was born in St. Louis—at Jewish Hospital. He graduated from the University of Chicago in 1955 and received his M.D. degree in 1959 from the University of Missouri.

He served his internship and residency at Jewish Hospital. He was a research fellow with specialties of allergy, immunology and arthritis at Scripps Foundation in LaJolla, Ca., from 1962 to 1963.

He is certified by the American Board of Internal Medicine and has published a number of papers. He is in the private practice of internal medicine, and is attending physician in the division of internal medicine in the department of medicine. He holds the rank of assistant professor at Washington University School of Medicine.

Richard G. Sisson, M.D.
President: 1980-1982

This brings us full circle to the incumbent president of the medical staff, Richard G. Sisson, M.D. Dr. Sisson is just getting started as president, since his term of office began last month.

Dr. Sisson was born in Boston, Mass., did his pre-medical education at Harvard University and received his M.D. degree from Yale in 1943. He did his internship at Barnes Hospital, served as captain in the United States Air Force Medical Corps, served as chief of the general surgery clinic and currently is senior attending surgeon in the hospital’s department of surgery. He holds the rank of assistant professor at Washington University School of Medicine.

He is a member of the American Medical Association, the St. Louis Medical Society and the Missouri Medical Society.

Dr. Sisson will have charge of the direction of the program of the medical staff and it is expected that he, too, will make his professional mark in history.
The Gallery:
Chairmen of the Board

August Frank
President: 1900-1907

Julius Lesser
President: 1907-1908

David Eiseman
President: 1908-1915

August Frank, the first president of the Jewish Hospital Board of Directors, served in that capacity for seven years.

Julius Lesser was elected to the board of directors in 1900. He served in that office until 1907, when he was appointed president, a position he filled for one year.

David Eiseman was elected to the board in 1900. He served as vice president from 1907 until 1908. He was elected president in 1908, a term he served until 1915, the year he died.
A gallery of the past presidents/chairmen of the board hangs in the President's Room of The Jewish Hospital of St. Louis. The gallery begins with the portrait of August Frank, the first president who served from 1900-1907, and includes each of the 11 ensuing presidents.

The gallery was coordinated by David A. Gee, hospital president, in 1963.

In light of the recent unveiling of the medical staff presidents gallery, it seems an appropriate time to also pay tribute to these men who dedicated so many hours of their time to the hospital.

Aaron Waldheim
President: 1915-1938

Henry A. Friedman
President: 1938-1947

Major B. Einstein
President: 1947-1953

Aaron Waldheim was elected to the board of directors in 1907. The following year he was elected vice president and worked in that capacity until elected president in 1915. Waldheim was president until he died in 1938.

Henry A. Friedman joined the board of directors when he filled the unexpired term of Dr. Herman Tuholske as first vice president in 1933. Friedman was elected the following year as treasurer of the building fund, a position he filled until being appointed president in 1938. Friedman worked as president of the board from 1938 until 1947. He then served as an honorary member in 1951. In 1954 he was granted life membership. Friedman died three years later.

Major B. Einstein was elected to the board in 1934 to fill the unexpired term of S. I. Rothschild. He was appointed chairman of the committee on Conference and Medical Matters in 1936; he served as vice president from 1938 until 1946, when he resigned from this position to become president of the Jewish Federation.

The following year, in 1947, Einstein was elected president of the hospital board, and he served in that capacity until 1953. Einstein was granted life membership in 1954. He is still a member of the board today.

Richard Weil became a member of the board in 1948. He was appointed to the Conference Committee in 1950, elected vice president in 1951 and appointed president in 1954. He served as president until 1957. Having been granted life membership in 1958, Weil still is a member of the board today.

John Shoenberg was formerly on the board of the Jewish Sanatorium. He joined the Jewish Hospital board in 1951. He was elected vice president in 1954, and was re-elected to that position in 1956. In 1958, Shoenberg was appointed president, a term he served until 1963. Shoenberg was given life membership in 1963. He was a member of the board until his death in April 1974.

Joseph F. Ruwitch was elected to the board to fill the unexpired term of Blanche Greenwald (Mrs. Leo) in 1955. He was elected vice president in 1958. Ruwitch resigned from the board to serve as president of the Jewish Federation from 1959 until 1961, when he was re-elected as member of the hospital’s board. Ruwitch served as vice president again from 1961 to 1963, when he was elected president. Ruwitch, a current member of the board, received life membership in 1968.
Edward B. Greensfelder
President: 1968-1974

Edward B. Greensfelder was elected to the board to fill the unexpired term of Robert Mayer in 1954. He was re-elected as a board member every term until 1961, when he was appointed vice president, a term he served until being elected president in 1968. Greensfelder was president of the board for six terms, until 1974. He is a life member and currently serves on the board.

Lee M. Liberman
Chairman: 1974-1979

Lee M. Liberman was elected to the board to fill a vacancy created by Sam C. Sachs in 1962. He was elected assistant secretary in 1965, and then elected treasurer in 1968, an office he filled for several terms. He was named vice president in 1972, and served in that capacity until appointed president in 1974. That year, during Liberman’s term, the title of “president” was changed to “chairman.” Liberman was re-elected chairman for a second term in 1975, a position he filled until 1979. Liberman is a current member of the board.

Raymond H. Wittcoff
Chairman: 1979-present

Raymond H. Wittcoff, the current chairman of the board, was elected to the board in 1962. He was re-elected as a board member each term until 1975, when he was appointed vice chairman. He served in that capacity until being named chairman in 1979.
Obstetrics Department to Be Retained, Strengthened

The Jewish Hospital of St. Louis board of directors has decided to retain and strengthen the hospital's obstetrics department. The decision was made at a meeting of the board Dec. 20, 1980.

In connection with the decision, the board named a new full-time obstetrician-in-chief for the department. He is James P. Crane, M.D., assistant professor of obstetrics and gynecology at the Washington University School of Medicine. He will be joined at the hospital by two other full-time obstetricians. In addition, a full spectrum of subspecialists in obstetrics will be available to the hospital through the medical school. Other obstetricians will be appointed to the hospital staff as part of the new program.

Robert Burstein, M.D., who has served on a part-time basis as the obstetrician-in-chief for the last eight years, lauded the board’s decision to keep the department and to appoint a full-time chief of obstetrics. “I am enthusiastically looking forward to it, and I am eager to work with Dr. Crane and his associates. A full-time obstetrician-in-chief will allow us to strengthen the department considerably,” he said. Dr. Burstein, who is in private practice, will remain on the staff of Jewish Hospital.

David A. Gee, hospital president, said that Dr. Crane was especially noted for his work in clinical genetics. Dr. Crane’s genetics laboratory, now located at Washington University Medical School will be moved to Jewish Hospital. The hospital will be the base of this service for the entire medical center as well as the region. Gee pointed out that the laboratory is one of the few such facilities located anywhere in the Midwest.

News Briefs

Raymond H. Witcoff, chairman of the board of directors of The Jewish Hospital of St. Louis, has been elected a director of The Equitable Life Assurance Society of the United States, effective Dec. 1, 1980. Witcoff is president of Transurban Investment Corporation, St. Louis.

Harold Ellis, professor of surgery, University of London, Westminster Medical School, has been invited to The Jewish Hospital of St. Louis as the Probstein Visiting Professor, April 10 and 11, 1981. Ellis is the first person from outside of the United States to be sponsored by the fund.

Ellis claims an impressive resume: he is the recipient of the Hallett Prize, Royal College of Surgeons; president-elect of the section of surgery, Royal Society of Medicine; on the surgical staff of five English hospitals; a member of several medical sciences boards, and the author of more than 200 papers appearing in surgical journals and textbooks. Ellis’ specialties are abdominal surgery, advanced malignant disease, adhesion formation, experimental studies on wound healing, peptic ulcer surgery and peripheral vascular disease.

During his two-day visit, Ellis will address the medical staff and students and will tour the entire hospital.

The Probstein Visiting Professor is funded each year by Mr. and Mrs. Leon Leonson. The fund was established in the late 1960s in honor of Jacob G. Probstein, M.D., consultant in surgery.

Medical Staff News

Rose Boyarsky, Ph.D., presented a speech on “Anatomical and Physiological Contributions to Male Sexual Dysfunction” before the Missouri Psychological Association, Nov. 14-15, in Kansas City, Mo.

William J. Catalona, M.D., has authored a paper on the “Role of Lymphadenectomy in Carcinoma of the Penis” for publication in the October issue of Urologic Clinics of North America. With several other physicians, Dr. Catalona also co-authored “Serum Alpha-Fetoprotein and Human Chorionic Gonadotropin in Patients with Seminoma” for the Journal of Urology.

Richard E. Clark, M.D., co-authored a paper with J.P. Marbarger, P.N. West, J.A. Spratt, J.M. Florence, C.L. Roper, T.B. Ferguson and C.S. Weldon on “Thymectomy for Myasthenia Gravis for the Young Adult—Long-Term Results,” which appeared in the November issue of the Journal of Thoracic and Cardiovascular Surgery. Dr. Clark presented the paper in April to the American Association of Thoracic Surgeons, in San Francisco. On June 9 and 10, Dr. Clark presented a speech on “Calcium Antagonists—A Different Approach to Cardioplegia” at the Cardioplegia Symposium, London. At the Annual Pan-Pacific Surgical Association meeting on Myocardial Protection, Jan. 14-18, 1980, in Honolulu, Dr. Clark participated in panel discussions on “The Case for Core Cooling” and “Cardioplegia for Myocardial Protection Membrane Ionic Blockade — The Way for the Future?” Dr. Clark also attended a symposium of the American Society for Extracorporeal Technology on “Preservation of the Ischemic Myocardium” in Indianapolis on Oct. 11. Dr. Clark is now the chairman of the medical devices committee of the American College of Surgeons.
Sheldon Cohen, D.M.D., participated in a panel discussion at the Nov. 1-2 Council of Hospitals Meeting on “The American Association of Dental Schools General Practice Residency in Dentistry” in Washington, D.C. Dr. Cohen also attended the American Association of Hospital Dentists Nov. 14-16 convention on “The Medically Compromised Patient” in San Francisco. Dr. Cohen is now the Missouri chairman of the American Association of Hospital Dentists.

Gustave Davis, M.D., presented a speech Nov. 3 on the “Pathology of the Neonatal Temporal Bone” before the department of pathology at Hartford Hospital, Hartford, Conn. Dr. Davis also spoke on “Health Effects of Industrialization” before the Washington University Department of Technology and Human Affairs on Nov. 12.

Mark R. Feldman, M.D., has been appointed an instructor in the department of obstetrics-gynecology at the Jewish Hospital of St. Louis. He is also the Missouri representative and junior fellow coordinator for the American College of Obstetrics and Gynecology.

Samuel B. Guze, M.D., vice chancellor for medical affairs at Washington University and president of the Washington University Medical Center, was installed as chairman of the board of directors of the Association of Academic Health Centers during the association’s annual meeting in Florida on Oct. 4.

Randy Hammer, Ph.D., has contributed a chapter on “The Psychological Aspects of Immobilization” for a book by Franz U. Steinberg, M.D., on The Immobilized Patient. Dr. Hammer spoke on “Mid-Life Sexuality—Changes that Occur” before Parents Without Partners on Dec. 4, in Kirkwood. Dr. Hammer also attended a convention at the University of Michigan, Ann Arbor, on “Sexuality and Physical Disabilities: Medical Aspects and Clinical Care.”

Jack Hartstein, M.D., ophthalmologist, served as visiting professor Oct. 21 at the Yale University School of Medicine.

Sidney Kasper, M.D., spoke on “Dealing with Temper Tantrums” before the Parents Group, United Hebrew Temple Preschool, on Nov. 13. Dr. Kasper also spoke to the residents of Delcrest Apartments on “Coping with the Senior Years in Today’s World.”

Ronald Krone, M.D., co-authored a paper with Ellen Friedman, S. Thanavaro, J. Phillip Miller, Robert Kleiger and V. Charles Oliver on “Long-Term Prognosis with First Transmural and Non-Transmural Infarction,” which he presented to the American Heart Association on Nov. 17, in Miami Beach.

Arnoldo Kuczer, M.D., attended a maxillofacial trauma workshop sponsored by the University of Texas Health Science Center at San Antonio and the American Academy of Facial Plastic and Reconstructive Surgery, Nov. 7-9, in San Antonio.

Paul Lowenstein, M.D., attended a meeting of the American College of Angiology on vascular disease, Nov. 5-9, in San Diego.

Elizabeth Mann, M.D., spoke on stress before the Central Region Partners’ Conference, on Oct. 15, at the Sheraton West Port, St. Louis. Dr. Mann also participated in a panel discussion entitled “Health Care Team Concept—Fact or Fiction.” The discussion was sponsored by the University of Missouri-Columbia School of Medicine and Continuing Education and Extension for Health Professions, at the St. Louis Cheshire Inn, Nov. 20.

John A. McDonald, M.D., co-authored a paper with D.G. Kelley on “Degradation of Fibronecrtin by Human Leukocyte Elas-
Jewish Hospital News Briefs

Arieh Harell, M.D., of Tel Aviv, Israel, spent two weeks in September as a visiting professor at The Jewish Hospital of St. Louis, under the sponsorship of the department of medicine. While here, Dr. Harell had a full itinerary, including attending and giving conferences, meeting with the hospital board of directors and administrators, addressing a community organization, teaching the medical students, and he gave a talk at the physicians’ grand rounds. Dr. Harell’s specialty is endocrinology and metabolism.

Joseph G. Sandza Jr., M.D., recently authored a paper on “Heart Surgery in the Elderly,” which he presented at the Inter-American College of Cardiology Convention, Sept. 7-13, in San Juan, Puerto Rico. Dr. Sandza has also been named a fellow of the American College of Surgeons.

Richard Shatz, M.D., spoke to the group Reach to Recovery on “Breast Reconstruction Following Mastectomy,” in October, at Jewish Hospital. Dr. Shatz also attended the convention of the American Society of Plastic and Reconstructive Surgeons in New Orleans, in October.

Moisy Shopper, M.D., attended the Family Violence Seminar of the Greater St. Louis Police Academy on Oct. 27, where he presented a lecture on “Violence and the Dynamics of Family Violence.”

Nathan Simon, M.D., spoke on “Psychological Issues in Intensive Care Nursing,” during a critical care course at St. Mary’s Hospital, on Oct. 29 in St. Louis.

Morton Smith, M.D., has been elected chairman of the pathology committee of the American Academy of Ophthalmology.

Samuel Soule, M.D., has written 11 biographical sketches of “Our Medical Ancestors,” which will appear monthly in the Bulletin of the St. Louis Metropolitan Medical Society, beginning this month.

John Taylor, M.D., has co-authored a paper with Lachman Abichandani, M.D., on “Creatine Phosphokinase Elevations and Psychiatric Symptomatology” for Biological Psychiatry. In May Dr. Taylor attended the annual convention of the American Psychiatric, in San Francisco. Dr. Taylor is the consulting psychiatrist, medical advisory committee, for the Visiting Nurses Association, St. Louis.

Stanley Thawley, M.D., presented a “Schleral Myringoplasty” to the Southern Medical Association conference, Nov. 16-18, in San Antonio.

Harvey Walker Jr., M.D., gave a biographical sketch of Dr. Michael Somogyi, and he spoke on insulin therapy and the Somogyi effect mythology of diabetology, as part of a diabetes update presented by the Somogyi Diabetes Foundation, Inc., Nov. 19-21, at the Chase-Park Plaza, St. Louis. Dr. Walker participated in a panel discussion at the event on “Prevention of Diabetes Mellitus and its Complications and Emergencies,” on Nov. 20.

E.A. Wallach, M.D., spoke on “Malignant Acrospiroma and Widespread Metastases” before the American Academy of Dermatology, Dec. 6-11, in New York City, at the academy’s annual scientific meeting. Dr. Wallach has also been re-elected as a trustee of the Dermatology Foundation.

Robert S. Weinhaus, M.D., spoke on psychosomatic medicine on the “Your Health” program for broadcast by radio station KMOX, St. Louis.

Richard Wetzel, Ph.D., has written a paper on “Suicide: The Need for a Cognitive Perspective” for The Behavioral and Brain Sciences.

Jacob M. Zeffren, M.D., has co-authored a paper with Alan Yagoda, David Kelsen and Roger Winn on “Five-Day Continuous Infusion of Vinblastine,” which he presented to the American Association of Cancer Research, May 28-31, in San Diego.
In a continuing effort to provide high-quality medical services, The Jewish Hospital of St. Louis recently purchased a new Midas Rex Cutting Drill, a device for orthopedic surgery. This new piece of equipment, for which contributions will be accepted to offset its expense, will help maintain Jewish Hospital’s high standards of health care.

Its high-pitch scream brings back instant and uncomfortable memories of the dentist’s drill. The only dental patient that might benefit from this formidable drill, however, would be a horse. The Midas Rex, the operating room’s newest tool, is a pneumatically driven, high-speed cutting drill, peerless for cutting and shaping bones during joint replacements and other orthopedic surgery.

At first it looks like something you might find in the neighborhood machine shop. After seeing its array of metal and diamond bits and other attachments, though, the $19,000 price tag makes sense. The hospital has used similar, less expensive drills for years, but the new Midas Rex has a clear-cut advantage for both surgeons and patients: speed.

“The value is definitely in its speed,” says Orthopedic Surgeon Marvin Mishkin, M.D. “It’s a valuable instrument that will speed up operations and make our procedures more accurate.”

The tool operates at 73,000 RPM, much faster than conventional drills, and it is perfectly suited for both rapid, heavy bone dissection—where it can reduce operating time by 50 percent—and for detailed reconstructive work, the mainstays of joint replacement.

The drill has an enviable durability record, and its wide range of attachments gives it tremendous surgical versatility and appeal. Says Debbie Beckman, R.N., in charge of teaching its operation: “We’ll soon have everyone using it.”
Gifts to Jewish Hospital, whether large or small, are very much appreciated because they aid the hospital in maintaining the highest standards of health care.

_The Shopping List_ is a special feature listing particular items and their approximate costs for which various hospital departments have indicated a need.

This list is published to give the community an idea of the many different pieces of equipment every department requires to function efficiently, and also to allow prospective donors to choose a specific gift if they so desire.

Remember, your generosity might help save a life. A contribution used toward the purchase of a fetal heart monitor, for example, might mean it is more readily available when an emergency situation arises in the labor room. The early warning of any problems during labor that it provides might mean the difference between life and death for a newborn infant.

For more information on _The Shopping List_, contact the development office, at 454-7251.

Contributions
To Jewish Hospital Funds

Generous Contributions

Jack Adler Foundation has made a contribution to the Ben and Marilyn Fixman Cancer Research Fund (Tribute Fund).

Mr. and Mrs. Harold G. Blatt have made a contribution to the Directors' Fund.

Cooper & Lybrand have made a contribution to the Ben and Marilyn Fixman Cancer Research Fund (Tribute Fund).

Norma and Marvin Cherry have made a contribution to the Ben and Marilyn Fixman Cancer Research Fund (Tribute Fund).

Mrs. Ruth Franc has made a contribution to the Directors' Fund.

David A. Gee has made a contribution to the Directors' Fund.

I. E. Goldstein has made a contribution to the Mary Goldstein Scholarship Foundation (Tribute Fund).

Edward B. Greensfelder has made a contribution to the Directors' Fund for Dr. Robert M. Senior, Pulmonary Disease/Respiratory Care Division.

Mr. and Mrs. Phil N. Hirsch have made a contribution to the Ralph Hirsch Memorial Fund for Cancer Research.

Jewish Hospital School of Nursing Alumna has made a contribution to the School of Nursing Library Fund.

Mr. and Mrs. Sam Langsdorf, Jr. have made a contribution to the Directors' Fund.

John Levy has made a contribution to the Building Fund for the Cardiovascular Intensive Care Unit.

James R. Moog has made a contribution to the Hubert P. Moog Endowment Fund (Tribute Fund).

W. R. Persons Foundation, Mrs. Helen R. Persons have made a contribution to the Tribute Fund in honor of Elliot H. Stein and Dr. Theodore Reich.

Lawrence K. Roos has made a contribution to the Directors' Fund.

Edward R. Samuels has made a contribution to the Directors' Fund.

Gene M. Schneider has made a contribution to the Restricted Endowment Fund of Harry, Gene and Murray Schneider, New Market Hardware Company and Ace Construction and Engineering Company.

Mrs. John Shoenberg, Shoenberg Foundation, have made a contribution in memory of John M. Shoenberg for the John M. Shoenberg Research Fund (Tribute Fund).

Sydney M. Shoenberg, Jr., Shoenberg Foundation, have made a contribution in honor of Dr. Llewellyn Sale Jr. for renovation of Division 73 (Directors' Fund).

John E. Simon has made a contribution for the Simon Faculty Development Fund in Medicine (Directors' Fund).

Mrs. Mildred B. Simon has made a contribution for the Ira and Herbert Simon Research Fund and the Julian Simon Fund (Tribute Fund).

Meyer K. Weil has made a contribution for a fiberoptic scope for the Department of Otolaryngology.

Raymond H. Wittcoff has made a contribution to the Directors' Fund.
On Nov. 12 and 13, The Jewish Hospital of St. Louis Auxiliary hosted a conference of Jewish hospital-affiliated auxiliaries, drawing guests from across the United States. Here conference participants share ideas and suggestions at a morning meeting in the Brown Room.

Three surveyors from the Joint Commission on Accreditation of Hospitals (JCAH) visited Jewish Hospital for three days in November to review health care practices. According to Vice President Keith L. Callahan, “The visit went extremely well, with minimal recommendations.” The hospital has been accredited since the JCAH process began.
The Year of the Book

By Denise Pattiz Bogard

Editor’s Note: The day this story went to print, the publications department was informed of two more Jewish Hospital house staff members who have had books published this year. Ben H. Senturia, M.D., department of otolaryngology, and Morris D. Marcus, M.D., director, division of dermatology, department of medicine, are the authors/editors of Diseases of the External Ear, Second Edition, Grune & Stratton, 1980. James O. Hepner, Ph.D., is the editor of the book, Hospital Administrator—Physician Relationships: Case Studies in Health Administration, C.V. Mosby, June 1980. Congratulations are extended to these and any other Jewish Hospital staff members who have been published this past year.

Publishing is an integral part of any teaching institution, so it is not uncommon to see the bylines of Jewish Hospital staff members in medical journals, magazines and textbooks. What is unusual is to have four of them publish entire books within the same year.

Medical Librarian Ruth Kelly says she usually hears about one or two doctors who publish books each year; four authors in that time is “really something special.”

Recently, the New York Times ran a rather lengthy article describing the dismal state of book publishing. Headlining the story “A Troubled Time for Publishing,” the article stated that because of the decrease in book sales, “publishers must rethink every book and not just publish casually anymore... Many editors have lost their jobs. Lists have been pruned. Even some books under contract have been scrapped.”

Given the bleak situation, having a book published should be considered a major accomplishment; being specifically sought out by a publisher and asked to write is almost unheard of.

But that was the case with Franz Steinberg, M.D.; Nathan Simon, M.D.; Alex C. Sonnenwirth, Ph.D., and Gerald Sufrin, M.D.

The 216 would like to congratulate the physicians and to thank them for the generous donations of their books to the hospital’s Sidney I. Rothschild Medical Library. Their books have been placed in the reserve section and are available for reference.

The stories behind the books:

Medical students, interns, residents and members of the house staff do research, browse through journals and relax in the Sidney I. Rothschild Medical Library.
In the early 1970s, a group of nurses from the Jewish Hospital Medical Intensive Care Unit (MICU) approached Attending Psychiatrist Nathan Simon, M.D., then-director of the department of psychiatry. The nurses were having problems managing the pressures of their jobs; they were concerned with recurrent feelings of tension, irritability, depression, and felt generally “burned out” from the constant high stress level.

Dr. Simon began meeting with the nurses on a regular basis at their unit, whereupon a “process of mutual education about their conditions and the ICU began.” This process led to the psychiatrist’s increased interest in medical intensive care units and eventually to writing the book, *Psychological Aspects of Intensive Care Nursing*.

Dr. Simon explains: “The ICU nurse is a person who has learned a whole host of very specialized techniques. He or she works under situations which are different in intensity, where there are more deaths, more intensely ill and hopeless patients than in most other nursing areas in a hospital.”

As a result of the meetings, Dr. Simon began to “think about ways to ameliorate the ICU problems. Some problems are built in and can’t be cured, but we can help the situation systematically.

“And that’s what the bulk of my book is about—ways of approaching the entire environment of the intensive care unit and ways to reduce stress for the nurse.”

*Psychological Aspects of Intensive Care Nursing* touches upon many areas of intensive care units and the nursing involved, including: the first ICUs; a psychological assessment of frequently seen syndromes and depressions; communication patterns on the neonatal ICU; strategies for tension reduction for the nurses; patient problems; psychological aspects of pediatric ICU nursing; dealing with families, and other specific ICU challenges and problems.

Dr. Simon wrote eight of the book’s 15 chapters, all of which were “largely drawn on my experiences at Jewish Hospital.” Two chapters were co-authored with Jewish Hospital MICU Nurses Gail Poelker, R.N., and Suzanne Whitely, R.N., both of whom he thanks and acknowledges in his preface. He also thanks Medical Librarian Ruth Kelly, “who repeatedly performed heroic feats of wizardry in producing references,” and “all the MICU nurses at The Jewish Hospital of St. Louis. They were mostly patient and tolerant teachers, who were generous in their willingness to share their knowledge and feelings and to initiate me into some of the mysteries of ICU life.”
Alex Sonnenwirth, Ph.D., director of the division of microbiology, department of pathology and laboratory medicine, has been associated with Gradwohl's Clinical Laboratory Methods and Diagnosis text since 1958, writing and editing portions of each succeeding edition. The result: “People know where I am. I’ve been called ‘the Gradwohl text from the Jewish Hospital of St. Louis’ from as far away as Geneva, Switzerland and Bangkok, Thailand.”

This identification is sure to continue: Dr. Sonnenwirth is the senior editor of the eighth edition, which was published in July 1980 and already has received a laudatory reception.

The Gradwohl text, which Dr. Sonnenwirth considers “pretty much the Bible of clinical laboratory medicine,” has been updated and revised every seven to 10 years since its first edition in 1936. “The progress and changes in laboratory medicine, as in other areas of medicine, make change the rule rather than the exception.”

In the 10 years since the seventh edition, a great many laboratory tests have been eliminated because more precise and newer ones have been introduced in their places,” explains Dr. Sonnenwirth.

As a result, the eighth edition, which was co-edited with Leonard Jarett, M.D., is almost entirely different from the seventh edition, with all chapters new, revised or rewritten.

A section on immunology—encompassing eight chapters—was not included in past editions because “much of the immunological information was not even in existence 10 years ago.”

The eighth edition consists of two volumes, containing 2,700 pages, 11 sections, 108 chapters and 748 illustrations. Dr. Sonnenwirth wrote 16 chapters and, in addition, coordinated the works of 60 other contributors, including Gustave L. Davis, M.D., of the Jewish Hospital Department of Pathology and Laboratory Medicine.

During the two years that it took to complete the coordinating, writing and editing of the volumes, Dr. Sonnenwirth said he did not have “many weekends or nights left over for free time. It was two years of constant after-hours work to write my own chapters and get the other contributions coordinated.” He read all submissions carefully to “assure they were of significantly high caliber and as free of error as humanly possible,” and he had to go through the entire 2,700-page proofreading process twice.

Dr. Sonnenwirth donated sets of his volumes to the Sidney I. Rothschild Medical Library, the department of medicine library and the department of pathology library. Why? “As a 28-year veteran of the Jewish Hospital Laboratory Medicine Division, I felt that the voluntary medical and the resident medical staffs would benefit from the volumes. The Gradwohl text is a reference source, a laboratory manual and a textbook, which will be used for many years.”
Several years ago, Louis V. Avioli, M.D., director of the department of rehabilitation medicine, approached Franz Steinberg, M.D., to write a monograph on the immobilized patient as part of Dr. Avioli's series on "Topics in Bone and Mineral Disorders." Dr. Steinberg, an author of numerous articles and chapters, had never written a book. He accepted the challenge. Three years later, the project complete, the published copy was donated to the Sidney I. Rothschild Medical Library, and Dr. Steinberg already is busy editing the sixth edition of E.V. Cowdry's The Care of the Geriatric Patient.

"There really are no other books written on the immobilized patient except for a book entitled The Physiology and Pathology of Bedrest, written in 1965 by a British surgeon, Norman L. Browse," Dr. Steinberg explains.

When asked why he thinks a book on the immobilized patient has hitherto not been written, Dr. Steinberg replies: "A person who undertakes this task can't deal with just one part of it. The author must have a good enough working knowledge, for instance, of neurology, bone metabolism and the abnormalities of body muscles in order to read the material, understand it and put it together. Not many people are willing to do that."

Dr. Steinberg says he tried to present information on nearly every aspect of immobilization, including its effect on respiration, circulation, the bones, skeletal muscles, skin and joints. A chapter on the psychological impact of immobilization was written by Randy L. Hammer, Ph.D., psychologist in the department of rehabilitation medicine, and Emily H. Kenan.

As to Dr. Steinberg's success, Reginald R. Cooper, M.D., writes in the Journal of the American Medical Association: "I strongly urge all those involved in patient care to devote the few hours necessary to read this superb monograph. While the author does not pretend that this is encyclopedic in scope, he does give a brief, lucid overview that should stimulate all but the totally unresponsive to pay critical attention to the effects of immobility on patients."

Dr. Steinberg is pleased with the results of his three years of effort. He also believes the book, because of his association with Jewish Hospital, "will benefit the hospital in the general way that any of the work which comes out of the hospital does. People will look at Jewish Hospital as an academic institution, an institution that attracts people who want to work to advance medicine."

But the greatest benefit belongs to the author himself. "What may have been the most valuable aspect is that I learned a lot because I had to read a great deal and give the topic much thought. In this way, patients, too, may benefit."
Gerald Sufrin, M.D.

Gerald Sufrin, M.D., Jewish Hospital director of urology, was not surprised, only pleased, when asked by the International Union Against Cancer to chair a worldwide conference in Geneva, Switzerland, and edit the resulting monograph on renal adenocarcinoma (kidney cancer). "I have written and researched a lot on renal cancer, so I guess they figured I have a pretty good knowledge of the tumor—I have an expertise, if you will."

Dr. Sufrin worked extensively for four months organizing the Geneva conference. He contacted biochemists, radiologists, histopathologists and other renal tumor specialists from all over the world. In coordinating the conference, which he later assembled into the monograph, Dr. Sufrin says he "tried to identify aspects of this disease such that the conference and monograph would provide current information about this tumor, and, importantly, would suggest areas for future investigations."

"Renal adenocarcinoma remains a lethal disease, and survival rates for this tumor have remained essentially unchanged over the past 20 years," Dr. Sufrin writes in his introduction to the monograph, Renal Adenocarcinoma. "Clearly, improvements in the outlook of patients with this tumor will depend on diagnostic and therapeutic advances. In this regard, new insight into the biology of this tumor as it occurs in humans and in relevant animal systems is essential."

The group met in Geneva for two weeks in the summer of 1979. Following the conference, Dr. Sufrin spent the next several months assembling and editing the presentations into the monograph. Dr. Sufrin wrote the introduction, the opening section on animal models of renal cancer, and he summarized the conference data into a conclusion that "makes recommendations for future diagnosis, treatment, care and prevention for this particular tumor."

The monograph has been distributed to medical libraries throughout the world.

Dr. Sufrin said he considers it an honor to have been selected as conference chairman and monograph editor. "This distinction also speaks well for the academic and investigative commitment and environment of the Jewish Hospital."
The Tribute Fund provides research funds and appliances for patients in need.

Donations to this fund may be made by sending checks payable to The Jewish Hospital Tribute Fund, 216 South Kingshighway, P. O. Box 14109, St. Louis, Missouri 63178.

When a tribute is made, both the sender and the recipient receive an acknowledgement of the donation.

The following memorial and honorial contributions were received from November 7, 1980 through December 12, 1980. Any contributions received after December 12, 1980 will be listed in the next 216.

Dr. and Mrs. Randy Hammer and Family (Mary Goldman Nurses Scholarship Fund)
Nurse for a Day

It was called "Nurse for a Day," and it portrayed just that: the many and diverse duties of a Jewish Hospital student nurse.

Held Saturday, Nov. 15, the student recruitment event attracted 184 guests, all of whom had a good look at what it means to be a nursing student at Jewish Hospital.

After a luncheon sponsored by the committee on nursing and the school of nursing faculty, nursing students guided guests on tours of the school and hospital, where they got a first-hand impression of the world of nursing.

Above, Student Nurse Barbara Tulley, left, included a look at nursing school dormitory rooms during her tours. Below, Freshman Stephanie Hoskins spared little enthusiasm in describing the nursing program.
On Dec. 2, the first night of Hanukkah, employees of the Jewish Hospital gathered in the Messing Lobby of the Shoenberg Pavilion to participate in the lighting and blessing of the Hanukkah candles. Those attending included, from left, Gene Spector, M.D.; Lydia Motchen (Mrs. Carl), assistant to the president; Rabbi Lawrence Siegel, hospital chaplain; Robert Burstein, M.D.; Hospital President David A. Gee, and Alex C. Sonnenwirth, Ph.D.

A new candle was kindled each night throughout the eight days in remembrance of this historic celebration of the Jewish people.
