**Supplemental Figure 1.** MIC distribution of ceftazidime-susceptible (a) and cefepime-susceptible (b) carbapenem-resistant *P. aeruginosa* probability of target attainment using >60% $fT>MIC$ target at each MIC from the Monte Carlo Simulations for various doses of the respective antimicrobial. The right axis and bar graphs represent the proportion of isolates at each MIC. (c) and (d) represent the same data using a target of >50% $fT>MIC$. Dashed line represents 90% PTA.
