**Running title:** Small molecule inhibition of Vezf1 activity in endothelial cells.

**Keywords:** Vezf1; angiogenesis; vascular biology; endothelial cells; MSS31, tube formation, small molecule inhibitors computational modeling.

**Figure S1:** A. Red atoms are held fixed during docking of compounds; purple atoms are allowed restrained movement during the energy minimization step. In B., Model (white) is superimposed onto the crystal structure AAY (purple). Only the alpha carbon trace is shown.
