

Supplemental Figure 1- Changes in gene expression in mice following *Mogat1* ASO treatment. Male C57bl/6J mice were injected (IP) twice-weekly with ASO's targeted against *Mogat1* (5'-TGGCCACGTGGAGATACGAT-3' (20-mer)) or scramble control (50 mg/kg) for three weeks prior to fast (24 h) and liver harvest. **A:** Fasting mice receiving *Mogat1* ASO had significantly lower *Mogat1*, and *Acadm*, and no detectable expression of *Acadl* during fasting. Data shown as means \pm S.E., * $p < 0.05$, where indicated $n = 4-5$.
