

S3 Table. European and African *HLA-DQB1*06:02* haplotypes in African Americans

<i>DRB1-DQB1</i> Haplotype	Case (n)	Control (n)	
<i>DRB1*X-EUR DQB1*06:02</i>	10	38	48
<i>DRB1*X-AFR DQB1*06:02</i>	137	252	389
	147	290	437

Two-by-two table of counts of *DRB1*X-DQB1*06:02* haplotypes where *DRB1*X* denotes any allele other than *DRB1*15:01*. All HLA alleles had allele frequency greater than 0.005, and only *DQB1* alleles that were either completely European or African are considered. There is no restriction on the ancestry of the *DRB1* allele. Note: *DQB1* alleles did not pass imputation quality cutoff of $r^2 = 0.80$ (see text for details).
