

**Supplementary Figure 6: No difference in PPAR-δ levels between WT and *TREM-2<sup>-/-</sup>* AM**

**(A)** *PPAR-δ* basal expression was determined in WT and *Trem-2<sup>-/-</sup>* AM using RT-PCR (n = 3-4 per genotype). **(B)** PPAR-δ protein levels from whole cell extracts of WT and TREM2<sup>-/-</sup> AM. The specificity of the antibody was indicated by recombinant PPAR-δ (rPPAR-δ). Data are representative of two independent experiments.
