Contents

Supplementary Data 1 Differentially expressed genes in Htt-72Q-expressing primary cortical neurons vs. Htt-25Q-expressing neurons identified by RNA-seq analysis in Fig 1.

Supplementary Data 2 GO analysis of differentially expressed genes in Htt-72Q-expressing primary cortical neurons vs. Htt-25Q-expressing neurons, related to Fig 1F,G.

Supplementary Data 3 Genes differentially expressed in both the primary cortical neuron model and the cortex of R6/2 mouse model.

Supplementary Data 4 Genes differentially expressed in both the primary cortical neuron model and human HD cortex.

Supplementary Data 5 Lists of genes and interactions in the transcriptional regulatory network of mutant Htt-expressing cortical neurons in Fig 2.

Supplementary Data 6 Twist1-dependent deregulated genes in mutant Htt-expressing primary cortical neurons identified by RNA-seq analysis in Fig 5.

Supplementary Data 7 Twist1-dependent deregulated genes that harbor Twist-binding motif(s) in Fig 5E.

Supplementary Data 8 Potential regulators of Twist1-dependent transcriptional repression in mutant Htt-expressing cortical neurons, related to Fig 5G.
